ACKNOWLEDGEMENT

Behind every success, there is a driving force that motivates and inspires. I feel blessed when I say that I had not one but many sources of inspiration. I want to take this opportunity to thank each one of them in this section of the project.

First and foremost, I would like to pay my humble gratitude to **Prof. S.Karthikeyan**, who has been a teacher, mentor and guide to me. I was fortunate to study under her and got to learn immensely.

Secondly, I want to thank **Amity, Bangalore** for having given me this opportunity to work and gain valuable experience through an Organizational Study in a private limited company.

I am always thankful to God for giving me **parents** who have stood by my side through thick and thin. They have always motivated, inspired and guided me, shown me right from wrong and instilled in me the power of being rational. I would not be what I am today if it wouldn't have been for my parents. I owe the success of my project report to these people.

INTRODUCTION

INTRODUCTION

BUSINESS MODEL

when you're first beginning a business, one a few of the important important parts of the method is planning. although it is regularly tedious and overwhelming, you'll need to require the initial time to work out what you'll be promoting, who your clients are going to be, and universal, how your enterprise will make cash. to date, you'll need to select a commercial enterprise model and include this layout into your planning and research. what's an enterprise model? How does one pick out the proper one in your enterprise?

what's a business model?

A commercial enterprise model is an overview of ways an employer plans to shape cash with its product and client base at some stage in a particular market. At its core, a business model explains 4 things:

- What product or service an enterprise will sell?
- how it intends to plug that product or service
- What quite expenses it's going to face
- how it expects to expose a profit

important additives of an enterprise version

when it comes right all the way down to it, commercial enterprise fashions can vary in their form and feature—as you'll see from our enterprise version definition and short instance, but—they all carries an equal basic issue.

crucial elements of a business version include a unique fee proposition, a viable goal market, and a competitive advantage. without them, you don't have how of producing revenue.

This being said, business fashions aren't nearly income—you also got to keep in mind production charges and other factors in order to confirm the whole image.

- fee proposition: A feature that creates your product appealing to your clients.
- goal market: a particular group of customers who could have a hobby in your product.

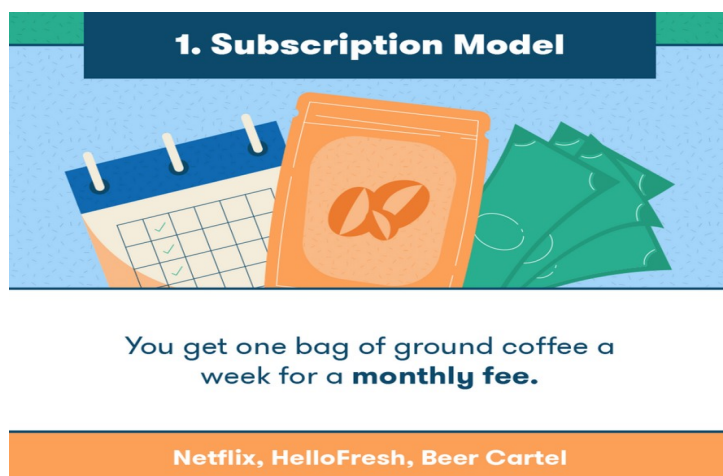

- competitive gain: a novel function of your services or products which couldn't without difficulty be copied with the aid of competitors.
- value structure: a stock of the constant and variable costs your commercial enterprise requires to feature, and the manner they affect pricing.
- Key metrics: The methods your agency measures fulfillment.
- resources: The bodily, economic, and intellectual property of your organization.
- hassle and answer: Your goal clients' ache factors, and the manner your company intends to satisfy them.
- revenue model: A framework that identifies feasible earnings resources to pursue.
- sales streams: The multiple approaches your organization can generate earnings.
- profit margin: the amount your revenue exceeds your enterprise prices.

these are the necessities that shape a business version, and that they're probably to vary as your commercial enterprise matures. From the outset, you'll not have an obvious idea of what every of these additives will look like on your enterprise. As you write your business plan, but they may be going to grow to be more obtrusive and your model will offer a vision and route on your enterprise idea.

1. Subscription model

A subscription commercial enterprise model is regularly applied to each conventional brick-and-mortar groups and on-line companies alike. basically, as we explained above in regard to Netflix, the patron pays a recurring charge on a monthly basis (or every other designated timeframe) for access to a products or services. an employer may additionally without delay deliver you their product inside the mail, in any other case you could pay a charge to use an app.

Examples: additionally, to Netflix,

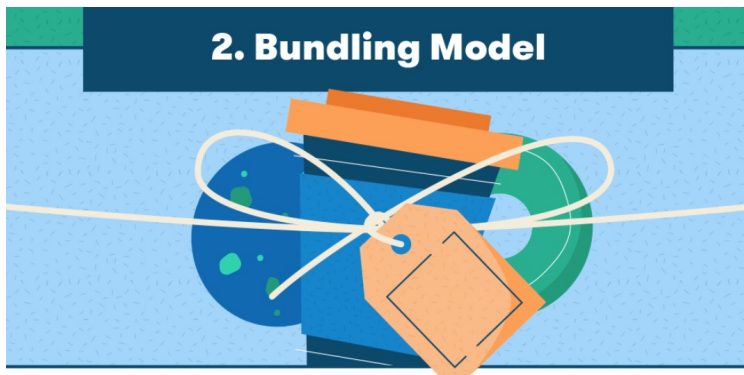

2. Bundling Model

Precisely like it sounds, the bundling business version entails organizations promoting or extra merchandise collectively as one unit, regularly for a lower fee than they could price promoting the products one at a time.

This sort of business version permits businesses to get an extra volume of sales and maybe market products or services which can be tougher to promote. but profit margins frequently shrink on the grounds that corporations sell the products for fewer.

Examples: Burger king

2. Bundling Model

You can buy coffee and a scone, bagel, or cookie for a **more attractive price** than just buying coffee.

AT&T, Adobe Creative Suite, Burger King

3. Freemium Model

The freemium business model has won popularity with the prevalence of on-line and software-as-a-carrier (SaaS) companies.

The fundamental framework goes like this: a software business enterprise hosts and affords a proprietary tool for his or her customers to freely get entry to, like an app or device suite. but the company withholds or limits the utilization of positive key functions that, over time, their customers will probably need to apply greater often. to recognize get entry to to those key features, users need to buy a subscription.

you can see how Spotify follows this model—they supply their customers free and open access to their entire database of tune at the same time as sprinkling in commercials among songs. sooner or later, many customers favor to pay a recurring monthly price for the top rate service just so they can stream track without interruption.

Examples: Spotify,

You **enjoy one free** cup of coffee a week,
but you have to **pay to get more.**

Spotify, LinkedIn, Skype

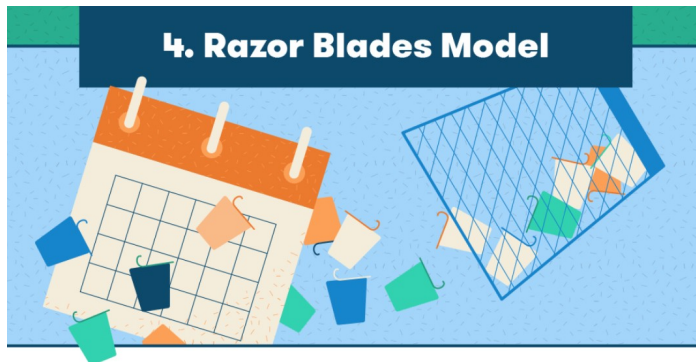

4. Razor Blades Model

To understand the razor blades model, you'll certainly appearance to your neighborhood drugstore. You'll be aware that replacement razor blades value quite razors themselves.

organizations offer a less expensive razor with the knowledge which you'll still buy costlier accessories—in this case, razor blades—inside the longer term. because of this, this model is stated because the “razor blades version.”

in addition to the regular razor blades version, you'll additionally see groups use the reverse razor blades model—wherein they provide customers a high-margin product then promotes the sales of lower-margin merchandise that accompany that initial product.

A classic instance of this version is Apple iPhones and Macs—you purchase the high-margin object, the telephone or pc, then Apple pushes extra products, tools, and services that accompany that object.

You buy a pod coffee maker, but need to buy expensive coffee pods **on a weekly basis.**

Keurig, Dollar Shave Club, Brita

5. Product to Service Model

imagine which you certainly are the owner of a corporation that creates scooters. let's say you would love pieces of metallic welded collectively. you'll in all likelihood ask another organization to weld the portions of steel together in preference to buying a welding device yourself. In essence, this example shows how the products to provider commercial enterprise version works.

businesses that comply with this sort of business model permit clients to get an end result rather than the equipment that gives you that end result.

Example: uber

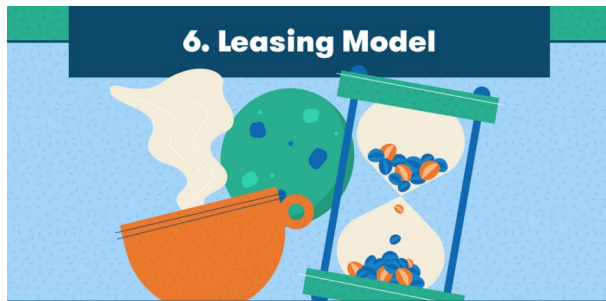

5. Product to Service Model

You **hire** a barista to make you and your friends coffee **for a specified time**.

Zipcar, LIME, Uber

6. Leasing Model

below a leasing commercial enterprise model, an organization buys a product from a supplier. That company then lets in some other organization to apply the products they purchased for a periodic price. Leasing agreements paintings best with large-price ticket gadgets like production and clinical equipment.

6. Leasing Model

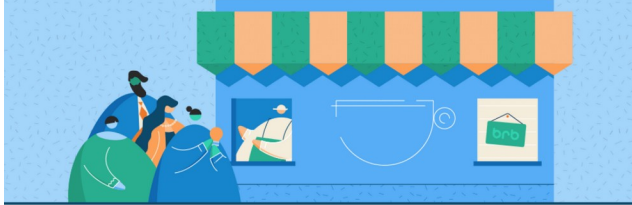

You **rent** an espresso machine for the weekend so you can **make your own lattes**.

U-Haul, Enterprise, Rent-a-Center

7. Crowdsourcing Model

Crowdsourcing includes receiving evaluations, data, or work from many numerous human beings using the net or social media. these styles of enterprise models allow organizations to faucet right into a big network of expertise while not having to rent in-residence personnel.

7. Crowdsourcing Model

You give your coffee roaster five ideas for new drinks **in exchange for a free coffee later.**

IMDB, Wikipedia, Indiegogo

Some traffic apps, for instance, encourage drivers to report accidents in real-time for the advantage of other app users.

Examples: Wikipedia, YouTube, IMDB,

8. One-for-One Model

As the name suggests, the one-for-one business version manner an employer donates one object to a charitable reason for each item it really is bought. This model appeals to the charitable nature and social awareness of purchasers to inspire them to get a services or products, at the same time as also allowing both the enterprise and therefore the customer to virtually engage in philanthropic efforts.

For every cup of coffee you buy, a free cup is **given to someone less fortunate.**

TOMS, SoapBox, Smile Squared

9. Franchise Model

Of all the numerous sorts of commercial enterprise models, the franchise version is probably the one that folks are maximum familiar with—after all, we every see and certain visit franchise organizations often in our day by day lives.

In brief, a franchise works like this: A franchise is a longtime enterprise blueprint it's sincerely bought and reproduced by using the purchaser, the franchisee. The franchiser, or authentic owner, works with the franchisee to help them with financing, advertising, and different business operations to ensure the enterprise capabilities as it must. In go back, the franchisee will pay the franchiser a percentage of the income.

Examples: Starbucks

An independent coffee shop suddenly opens up **five more identical locations** on the same street.

Starbucks, McDonald's, Domino's Pizza

10. Distribution Model

A company working as a distributor is responsible for taking manufactured goods to the marketplace.

Hershey's, as an example, manufactures and programs their chocolate, but distributors are the marketers that switch and sell the goods from the factory to a store. to shape earnings, distributors buy the merchandise in bulk and sell it to outlets at a better charge.

10. Distribution Model

A local coffee shop buys beans **wholesale from a distributor** that also supplies grocery stores and major chains.

ABC Supply Co., HD Supply, Avnet

11. Manufacturer Model

one of the main conventional commercial enterprise models, the manufacturer model refers to while a manufacturer converts uncooked substances right into a product.

businesses like Dell computers or Hewlett-Packard, both of which gather computer systems with components synthetic by different agencies, might nonetheless be considered producers.

11. Manufacturer Model

Your favorite coffee shop **starts manufacturing** their own coffee grinders and **selling them to distributors**.

Magic Bullet, Black+Decker, LG Electronics

12. Retailer Model

in the end, the remaining commercial enterprise version on our list is that the store version.

A store is that the closing link in the supply chain. these corporations purchase goods from vendors then sell them to customers for a charge that allows you to each cover expenses and switch a profit. retailers may also concentrate on a specific area of interest, like kitchenware, or deliver a variety of products.

Your favorite coffee shop starts selling coffee **products from bigger brands**, and the baristas **sell them for a commission**.

Nordstrom, Target, Best Buy

Chapter 1.1

INDUSTRY PROFILE

Every Entrepreneur features a different journey when it involves business. From the origin of idea to becoming a Unicorn, there are thousands of highs and lows, differentiated by the selection each entrepreneur makes within the best interest of his business. One thing which is common between all entrepreneurs is discipline and dedication and consistency, the concept of commitment plays a really crucial role within the success of each business.

Back in 2014, the concept of ordering food online was just about negligible and this involved demand within the market. Then enter the food ordering and delivery start-up: SWIGGY.

As of today, Swiggy has tie-ups with quite 28,000 restaurants expanded in over 13 cities of India including metropolitans like Bengaluru, Delhi, Mumbai, Chennai, Hyderabad and lots of more. the corporate has managed to urge quite 8, 00, 000 Swiggy mobile application downloads and has become a default name for everybody and anyone who desires to order food online.

The online delivery of food chain has been known to rent local men for deliveries which create tons of employment for people in these 13 cities of India. The story looks impressive but was it easy for Swiggy to succeed in such level of success? Well, founders say that success isn't achieved over one night of diligence.

FOUNDERS

Like any other entrepreneurial start-up, Swiggy has been successfully been through its ups and downs but what has majorly contributed within the company's success is that the will and dedication of its founders. The consistent efforts put in by the team to adapt to everyday changes within the trends and therefore the passion to function many of us as possible with a typical experience is what founders: Sriharsha Majety, Nandan Reddy and former co-founder Rahul Jaimini have believed in and inculcated into the ethics and culture at Swiggy.

SWIGGY: THE ORIGIN STORY

Swiggy are often called a second entrepreneurial venture of co-founders Nandan Reddy and Sriharsha Majety, first one being, Bundl. Both the co-founders are alumni of BITS, Pilani and after years of working and interning, they got together to introduce their venture, Bundle which may be a logistics aggregator that joins together SMEs to Courier Service Providers. The business was doing perfectly fine but the founders weren't satisfied and realized that there's an excellent unexplored potential within the food industry of India.

On the footprints of logistics, both the founders wanted something within the food industry which was related with technology and functioning offline also. 14th August 2014 was the date of inception for Swiggy, a dream project became reality by Harsha and Reddy. Swiggy was India's first online food ordering and delivering platform.

Both of those co-founders reached out to Rahul Jaimini to try to do the coding of the internet site and mobile app and welcomed him as a co-founder in Swiggy.

Swiggy was started during a small office space in Koramangala, Bangalore and therefore the company started off with limitations. The initial setup of food delivery was targeted at one neighborhood with 25 partner restaurants and 6 delivery executive personnel.

The company has grown massively after the initial 25% month-on-month growth. Now, the corporate features a major presence in every household, the default name for anyone meaning to order food online. the corporate has successfully expanded to over 13 Indian cities including metro cities like Mumbai, Delhi, Hyderabad, Bangalore and Chennai. the corporate features a tie-up with quite 8, 00,000 restaurants and is committed to serving customers with a convenient ordering and delivery experience.

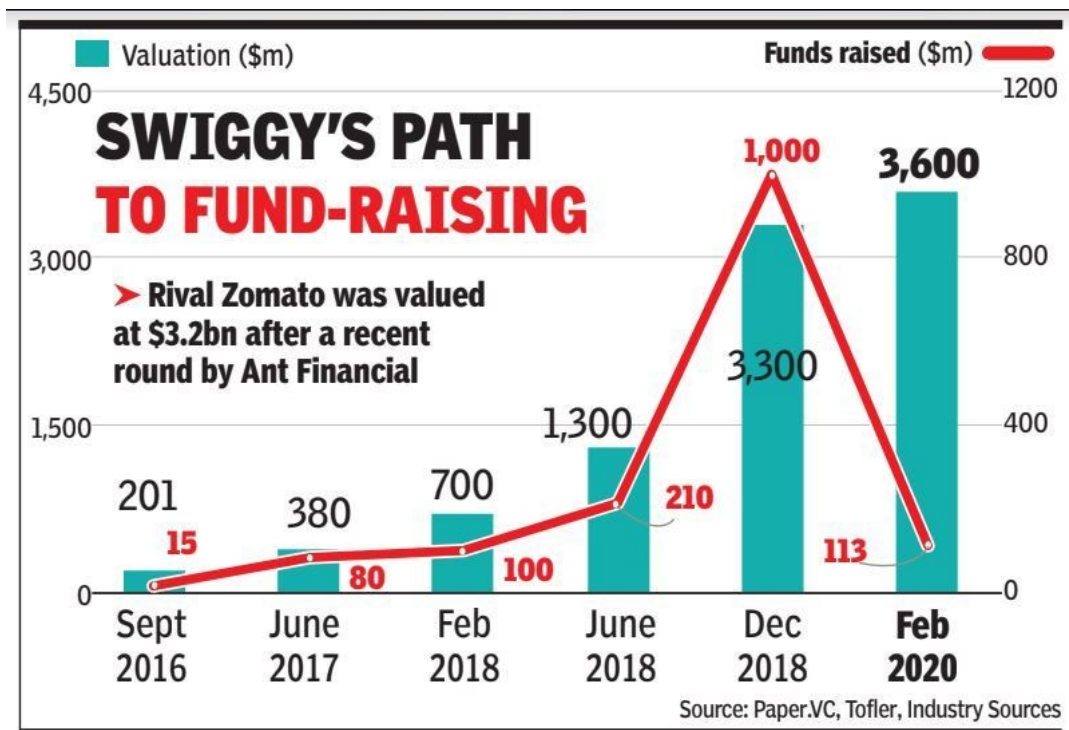

Harsha mentioned in an interview that he started discussing opportunities and business ideas with Nandan Reddy and both of them found great potential in online services and commerce industry generally. He gave an example involving Amazon, Flipkart, e-Bay as successful e-commerce platforms. It had been clear to both the co-founders that they wanted to try to do something which was technology-based and something which worked offline also. Therefore, Swiggy may be a perfect blend of both these features.

Harsha added that the blend of not being completely offline and not being completely online, gives them a competitive gain within the industry and it adds to the productivity of operations.

Almost 6 years within the industry and online delivery for food, Swiggy has become the very best used online platform amongst its competitors. The corporate has positioned itself in particular other competitors within the market and constant effort to deliver within the simplest time and supply an excellent experience, the corporate has maintained its position at the highest. Swiggy is here for an extended run and to form sure of their presence, they need launched a bunch of features within the past few years like Swiggy Access, Swiggy Schedule, Swiggy Pop and far more.

SWIGGY: FUNDINGS AND ACQUISITIONS

Swiggy's timeline from 2014 till 2020 in terms of funding and acquisitions are phenomenal. the corporate was introduced back in 2014 and its performance began to lure external investors in 2015. the primary funding raised by Swiggy was valued at \$2 million from SAIF Partners and Accel Partners alongside a further raise received from Northwest Venture Partners.

Moving on to 2016, the service delivery for ordering food online company managed to boost funds with a complete value of \$15 million from existing investors and a few new ones. a number of the new investors included big names like Harmony Partners and Bessemer Venture Partners.

Next in 2017, Swiggy was nowhere on the brink of looking back; subsequent investment was valued \$80 million which was raised during a funding round led by Naspers Limited which may be a multi-national consumer Internet company from South Africa.

In 2018, a \$100 million funding was received by Swiggy from Chinese Shopping Platform-Meituan-Dianping and existing investor Naspers and little investments that followed that year led the company's valuation to over \$1 Billion, making Swiggy a member of the distinguished Unicorn Club. Swiggy then went on to a corporation shopping spree and purchased Bengaluru-based AI start-up, Kint.i. o in February 2019.

The same year, the corporate invested Rs. 31 Crore in Fingerlix which may be a Mumbai-based able to eat food brand. In 2018, Swiggy decided to accumulate a milk-delivery start-up based out of Mumbai called SuperDaily. This acquisition was wiped out an all-cash deal. Before this point, in 2017: Swiggy acquired an Asian food start-up 48East which is predicated out of Bangalore.

Even before that in 2014, Acquisition of Scootsy logistics, a Mumbai-based start-up was acquired by Swiggy. Scootsy was a fashion and food delivery service which was struggling to interact customers and boost sales. Well, Swiggy to the rescue. In April 2020, Swiggy raised funding worth \$43 million which boosted the company's value within the market, taking it to \$3.6 billion. Yes! Swiggy features a market valuation of \$3.6 Billion.

Chapter 1.2

COMPANY PROFILE

Business Model Canvas of Swiggy

The business model canvas of Swiggy is predicated on a hyperlocal on-demand food delivery business operation. Working as a bridge between restaurants and customers, Swiggy utilizes an innovative technology platform that works as one point of contact.

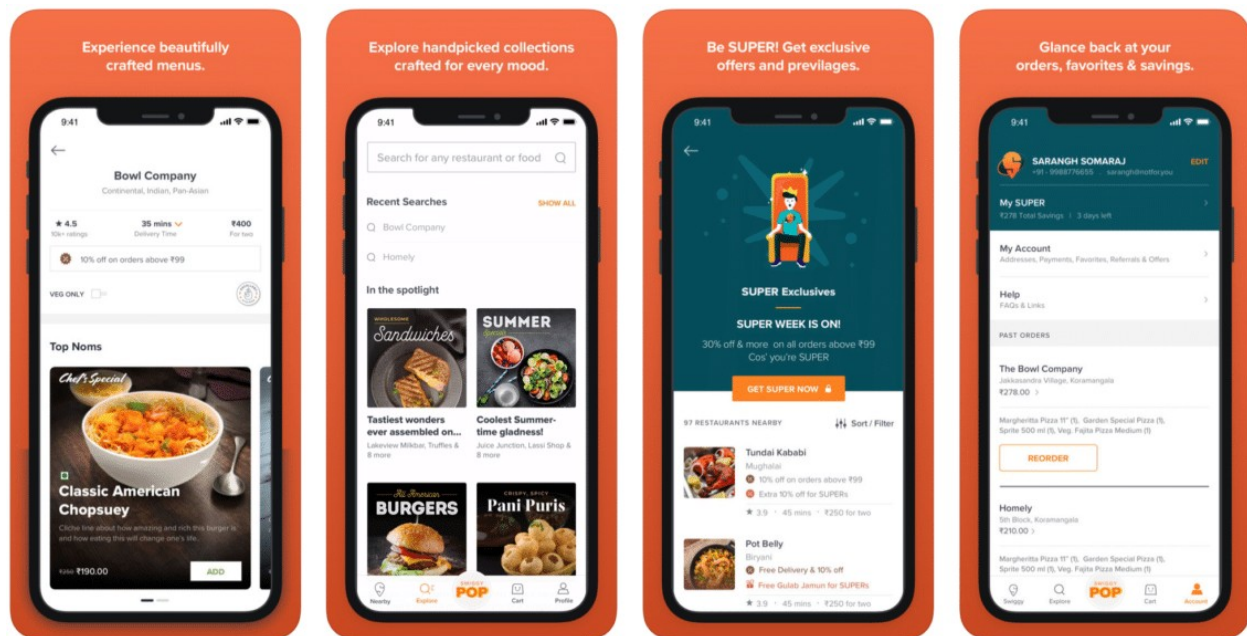

Their app allows urban foodies to order food from nearby restaurants and obtain it delivered at their doorstep. A broad list of restaurants and their menus with prices are exhibited within the app to settle on and order from.

Apart from accumulating restaurants, Swiggy also has its own fleet of delivery partners. They devour orders from partner restaurants and deliver it on-demand in but half-hour.

Because Swiggy operates as a dual-partnership model, it also benefits restaurants which will receive more orders from customers using their own Swiggy app.

Once the order is placed, they're going to know the order details, prepare the order and deliver it to Swiggy drivers. This way, restaurants don't get to use their own delivery personnel, saving costs and efforts.

All the Swiggy drivers within the vicinity receive a broadcast signal on their own Swiggy drive app when the order is placed. After they accept the order, they deliver it right the customer's doorsteps.

1. Customer Segments of Swiggy

The customer segments of Swiggy include those people that don't wish to travel bent restaurants and eateries to shop for food. people that want to order food online and need it delivered at their doorsteps are the principal customers of Swiggy.

After its recent business expansion, people that want to shop for and obtain other products delivered from nearby shops and stores of groceries, pharmacies, electronics, flower shops and gift shops within the city also are Swiggy's customers.

Few samples of stores currently available on Swiggy platform are Sodhi Super Marche, Garg Dastak, Best Basket and V.M Retail.

2. Value Propositions of Swiggy

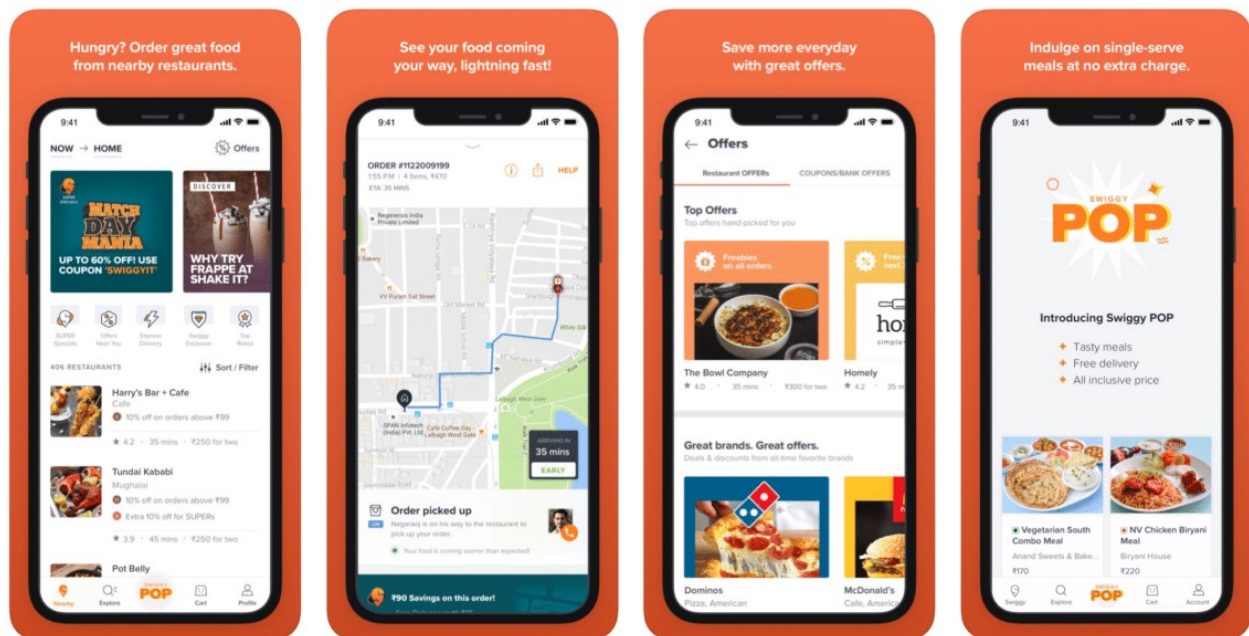

The main value proposition of Swiggy is its no-restriction order policy and efficient online payment system.

Swiggy has no minimum order requirement for delivery which is why it often receives orders amounted to but Rs. 100. it's the rationale for Swiggy scaling up to 14 million orders per month.

Easy access to customers on Swiggy's app is that the main value proposition offered to restaurant partners on the platform. Also, partner restaurants that join Swiggy's Access can save to 25% of their operational costs.

Swiggy Stores deliver groceries, flowers, medicines, and other things to the doorstep of its customers within an hour.

Swiggy Go – It offers instant pick & drop services employed by customers to send packages, lunch boxes to their kids, documents to the office, and parcels anywhere across the town. Also, customers can use Swiggy Go services to drop laundry or fetch forgotten keys.

Swiggy provides 8 different payment methods for its customers to pay conveniently for Swiggy orders. These are often categorized in 3 ways:

Digital Wallets

Paytm – Pay through your Paytm account and luxuriate in many wonderful offers and food deals.

PhonePe – Get the last word convenience by paying through PhonePe, the only digital wallet for online payment.

Freecharge – Swiggy has also included Freecharge as a web payment method to facilitate its customers efficiently.

Mobikwik – Now you'll collect SuperCash through Mobikwik's offers. So, prepare to avail amazing benefits on many services.

Cards

Credit and Debit Cards – Via Swiggy's net banking facility, you'll use any debit and Mastercard. Plus, you'll also avail great offers on them, and you'll even save your card details for your future payments.

Sodexo Meal, Ticket Restaurants Meal & Zeta Food Card – Got these meal cards? Great! Use them on Swiggy for your food orders.

Others

LazyPay – Pay now or pay later for your meals, LazyPay is here on Swiggy for you to handle your lazy moods of payments!

Cash-On-Delivery – Old is gold, isn't it? buy your Swiggy orders in cash if that's more convenient for you.

Another value proposition is its delivery competency. Its fleet size increased to 45,000 delivery personnel. it's over 20,000 active restaurant partners on its platform. It's operating in 8 cities and has even launched a central kitchen base facility for various restaurants. Swiggy has quite 1,000,000 app downloads.

3. Customer Relationships of Swiggy

Swiggy has positive customer relationships. It provides 24/7 active customer support to assist customers anytime, anywhere. It uses 'Customer Support Chat' services. It also has active social media pages where it responds promptly. to remain in-tuned with its customers and partners, it's developed excellent rating, review, and feedback systems.

4. Channels of Swiggy

The channels of Swiggy are mobile app, websites, and digital marketing. Its mobile app is out there on both Android and iOS. In 2019, Swiggy launched Swiggy Stores and Swiggy attend expand beyond food delivery.

5. Key Resources of Swiggy

As it has partnerships with local restaurant and shops, its main resources are local partners.

To name a couple of, Biryani Blues, Keventers, BombayKery, Wok Paper Scissors, and Yogisthaan are the bestselling restaurants at Swiggy.

Other key resources are delivery providers and its own human resources to manage administrative and technical operations. Technology is another resource it uses to work its apps.

6. Key Activities of Swiggy

Its key activities include:

1. Building partnerships with eateries and retail shops
2. Hiring delivery providers and suppliers (full-time/part-time/freelancers)
3. Acquiring customers and managing their orders
4. Managing delivery and payment process
5. Managing technical operations
6. Updating system and building IT infrastructure
7. Handling queries and concerns of consumers and partners
8. Picking and delivering items for patrons via Swiggy Go

7. Key Partners of Swiggy

The key partners of Swiggy are:

- **Restaurants and shops** – Restaurants who wish to possess food delivery services to supply customers with food on-demand. aside from eateries, key partners of Swiggy are shops (like pharmacies, groceries, etc.) who wish to supply their own products and services as Swiggy's partner.
- **Grocery Stores like Sodhi Super Marche, Garg Dastak, and Best Basket** are few of the Swiggy partners. While it's now on the exploratory talks with many online pharma players like MedPlus, Medlife, PharmEasy, and Myra to partner with them.
- **Instagram** – Swiggy recently partnered with Instagram allowing businesses to share Instagram's food order sticker on their stories with customers. Users can tap on the stickers to put similar orders using Swiggy's website.
- **Delivery providers** – These are the delivery suppliers. they will be full-time or freelancers who wish to figure and earn some extra cash. For the primary 4 km, Swiggy pays delivery

boys Rs. 4 per km. It then pays Rs. 6 per km after they need traveled 4 km. Besides, they're paid a further Rs.20 in unseasonal weather like rainy days. Also, Incentives are given on the idea of productive performance.

8. Cost Structure of Swiggy

- ❖ Swiggy has got to incur costs and expenditures for its day-to-day functions. Its major cost sources are:
- ❖ Payroll expenses for its employees and delivery partners. It also includes incentives and benefits which Swiggy offers to restaurants. for instance, giving a commission of about 2-3%.
- ❖ Costs of application and website development
- ❖ Running costs and maintenance charges
- ❖ Administrative, advertising, and marketing costs
- ❖ Additional costs in terms of promotional offers and benefits given to customers
- ❖ Kitchen base-like facility setup and maintenance costs
- ❖ Returns, refunds, and miscellaneous expenses

9. Revenue Streams of Swiggy

Now, comes the foremost critical question:

✓ How does Swiggy make money?

To get a definitive answer, we'd like to research Swiggy's Revenue Model. As it's expanding its business strategy and operations day by day, the revenue streams of Swiggy also are considerably increasing.

There are mainly 6 revenue streams at the present through which Swiggy makes money:

1. Delivery charges

The first sort of revenue stream Swiggy obtained is from its customers. A nominal delivery fee of Rs. 20 to Rs. 40 is charged from customers on orders below a threshold value of Rs. 250. Swiggy raises the fees during high order demands or unusual weather.

2. Commissions

Swiggy acquires another major part of the revenue stream from commissions. It collects commissions from restaurants to get sales leads and to deliver their food items through Swiggy's fleet. Restaurants need to pay 15% to 25% on every order placed from Swiggy's website.

3. Advertising

Swiggy earns advertising revenue within the following ways:

Banner Promotions – Swiggy promotes and displays ads of varied restaurants on its app. Restaurants, associated with different regions, receive greater visibility via banner promotion and pay price for the displayed page.

Priority listing of restaurants – Swiggy charges restaurants premium rates to offer them priority within the list of obtainable restaurants. A restaurant has got to pay high if it wants to be displayed higher on the list.

4. Swiggy Access

An entirely new idea supported the cloud kitchen concept, Swiggy came up with its Swiggy Access facility. It provides ready-to-use kitchen spaces to its restaurant partners in those areas where they don't operate.

With the aim of bringing food nearer to its customers, Swiggy enables restaurants to line up their kitchens in new locations and let the food delivered to them at the fastest speed.

Expecting around 25% of revenues in 2 years, Swiggy expands its cloud kitchen model to incorporate 30 restaurants onboard with 36 kitchens to four new cities.

5. Swiggy Super

Swiggy has launched a membership program called 'Swiggy Super' for patrons. This program offers unlimited free delivery on all orders above ₹99. After subscribing to the present program, customers don't need to pay surge pricing during excessive demands.

6. Swiggy Go

Another revenue stream for Swiggy may be a concierge service Swiggy Go that was launched in 2019 to supply instant pick & drop service.

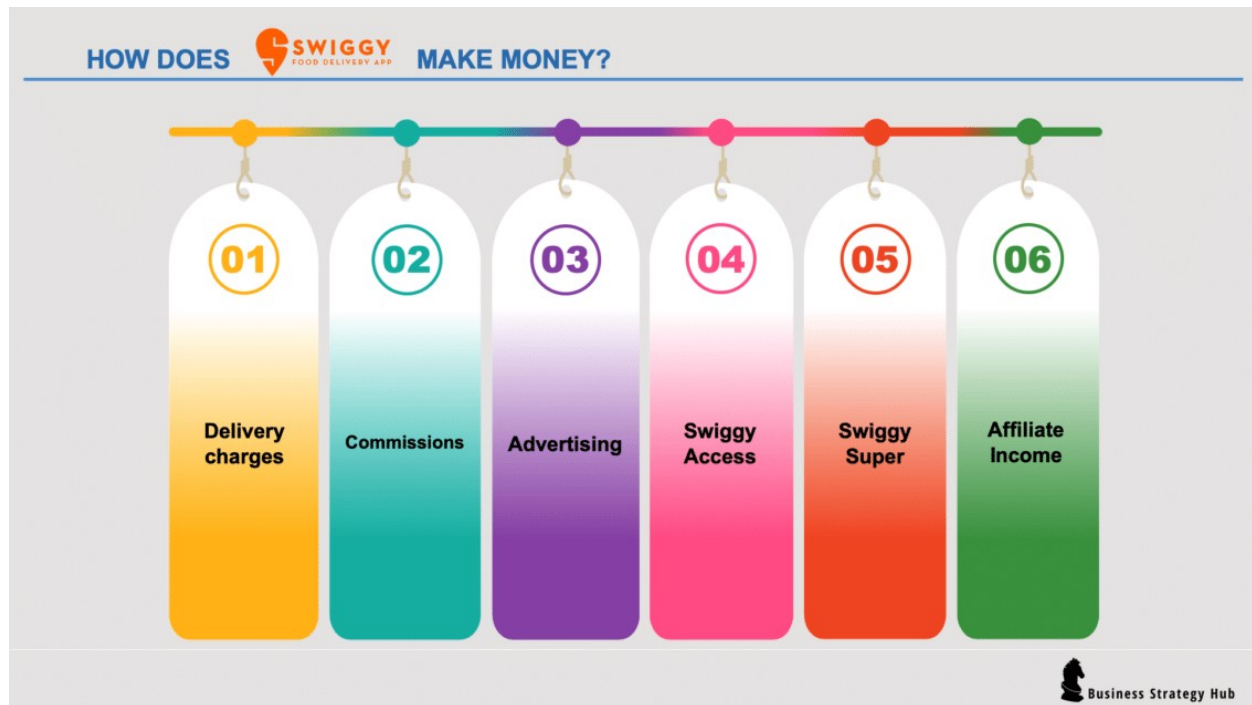

Through Swiggy Go, the corporate earns by helping customers to send, pick, and drop anything to and from different locations anywhere across the town.

7. Affiliate Income

Swiggy earns revenue by partnering with various financial institutions like Citibank, HSBC, and ICICI Bank. This affiliate income may be a new yet successful revenue stream where both parties benefit. It also allows customers to receive several mastercard offers from those financial companies.

Swiggy has undoubtedly become a number one online food ordering and delivery company. Having changed the whole landscape of how India eats, its innovative business model has made the lifetime of every foodie easier, tastier, and more fun.

With its fast deliveries, live order tracking, and no restrictions on order amount, Swiggy isn't far away from taking an enormous chunk of India's food-tech market. it's been demonstrated through Swiggy's business model.

SWIGGY: VISION

Swiggy co-founders Sriharsha Majety and Nandan Reddy have a really distinct vision for the corporate. They aim to elevate the standard of life and knowledge of urban consumers by offering convenience which no other competitor is offering in terms of food ordering and delivery and overall experience. the corporate intends to expand Swiggy in over 300 cities and to all or any major metros, ushering through the branches of convenience by offering door-to-door services.

Chapter 2

LITERATURE REVIEW

Literature review

2.1 Business Model

A business model is just an idea describing how a business intends to form money. It explains who your customer base is and therefore the way you deliver value to them and the related details of financing. and therefore, the business model canvas allows you to define these different components on one page.

The business model canvas may be a strategic management tool that allows you to visualize and assess your business idea or concept. It's a one-page document containing nine boxes that represent different fundamental elements of a business.

The business model canvas beats the normal business plan that spans across several pages, by offering a way easier thanks to understand the various core elements of a business.

The right side of the canvas focuses on the customer or the market (external factors that aren't under your control) while the left side of the canvas focuses on the business (internal factors that are mostly under your control). within the middle, you get the worth propositions that represent the exchange useful between your business and your customers.

The business model canvas was originally developed by Alex Osterwalder and Yves Pigneur and introduced in their book 'Business Model Generation' as a visible framework for planning, developing and testing the business model(s) of a corporation.

Why you would like a Business Model Canvas

The BMC provides a fast overview of the business model and is barren of the unnecessary details compared to the normal business plan. The visual nature of the business model canvas makes it easier to ask and understand by anyone. It's easier to edit and it are often easily shared with employees and stakeholders. The business model canvas is often employed by large corporations also as startups with just a couple of employees. It clarifies how different aspects of the business are associated with one another. You can use a BMC template to guide a brainstorming session on defining your business model effectively.

How to Make a Business Model Canvas

There are nine building blocks within the business model canvas and that they are customer value proposition, customer segments, channels, customer relationships, revenue streams, key resources, key partners, key activities, and price structure.

When filling out a business model canvas, you'll brainstorm and conduct research on each of those elements. the info you collect are often placed in each relevant section of the canvas. So have a business model canvas ready once you start the exercise.

9 components of the BMC are in additional detail.

Customer segments

These are the groups of individuals or companies that you simply try to focus on and sell your product or service to.

Segmenting your customers supported similarities like geographic area, gender, age, behaviors, interests, etc. gives you the chance to raised serve their needs, specifically by customizing the answer you're providing them.

After a radical analysis of your customer segments, you'll determine who you ought to serve and ignore. Then create customer personas for every of the chosen customer segments.

There are different customer segments a business model can target and that they are;

Mass market: A business model that focuses on mass markets doesn't group its customers into segments. Instead, it focuses on the overall population or an outsized group of individuals with similar needs. for instance, a product sort of a phone.

Niche market: Here the main target is centered on a selected group of individuals with unique needs and traits. Here the worth propositions, distribution channels, and customer relationships should be customized to satisfy their specific requirements. An example would be buyers of sports shoes.

Segmented: supported slightly different needs, there might be different groups within the most customer segment. Accordingly, you'll create different value propositions, distribution channels, etc. to satisfy the various needs of those segments.

Diversified: A diversified market segment includes customers with very different needs.

Multi-sided markets: this includes interdependent customer segments. for instance, a Mastercard company caters to both their Mastercard holders also as merchants who accept those cards.

Customer relationships

In this section, you would like to determine the sort of relationship you'll have with each of your customer segments or how you'll interact with them throughout their journey together with your company.

There are several sorts of customer relationships

Personal assistance: you interact with the customer face to face or by email, through call or other means.

Dedicated personal assistance: you assign a fanatical customer representative to a private customer.

Self-service: here you maintain no relationship with the customer, but provides what the customer must help themselves.

Automated services: this includes automated processes or machinery that helps customers perform services themselves.

Communities: these include online communities where customers can help one another solve their own problems with reference to the merchandise or service.

Co-creation: here the corporate allows the customer to urge involved within the designing or development of the merchandise. for instance, YouTube has given its users the chance to make content for its audience.

You can understand the type of relationship your customer has together with your company through a customer journey map. it'll assist you identify the various stages your customers undergo when interacting together with your company. And it'll assist you add up of the way to acquire, retain and grow your customers.

Channels

This block is to explain how your company will communicate with and reach bent your customers. Channels are the touchpoints that permit your customers connect together with your company.

Channels play a task in raising awareness of your product or service among customers and delivering your value propositions to them. Channels also can be wont to allow customers the avenue to shop for products or services and offer post-purchase support.

There are two sorts of channels

Owned channels: company website, social media sites, in-house sales, etc.

Partner channels: partner-owned websites, wholesale distribution, retail, etc.

Revenue streams

Revenues streams are the sources from which a corporation generates money by selling their product or service to the purchasers. And during this block, you ought to describe how you'll earn revenue from your value propositions. A revenue stream can belong to at least one of the subsequent revenue models,

Transaction-based revenue: made up of customers who make a one-time payment

Recurring revenue: made up of ongoing payments for continuing services or post-sale services
There are several ways you'll generate revenue from

Asset sales: by selling the rights of ownership for a product to a buyer

Usage fee: by charging the customer for the utilization of its product or service

Subscription fee: by charging the customer for using its product regularly and consistently

Lending/ leasing/ renting: the customer pays to urge exclusive rights to use an asset for a hard and fast period of your time

Licensing: customer pays to urge permission to use the company's property

Brokerage fees: revenue generated by acting as an intermediary between two or more parties

Advertising: by charging the customer to advertise a product, service or brand using company platforms

Key Activities

What are the activities/ tasks that require to be completed to satisfy your business purpose? during this section, you ought to list down all the key activities you would like to try to to form your business model work. These key activities should specialize in fulfilling its value proposition, reaching customer segments and maintaining customer relationships, and generating revenue.

There are 3 categories of key activities;

Production: designing, manufacturing and delivering a product in significant quantities and/ or of superior quality.

Problem-solving: finding new solutions to individual problems faced by customers.

Platform/ network: Creating and maintaining platforms. for instance, Microsoft provides a reliable OS to support third-party software products.

Key Resources

This is where you list down which key resources or the most inputs you would like to hold out your key activities so as to make your value proposition.

There are several sorts of key resources and that they are

- ❖ Human (employees)
- ❖ Financial (cash, lines of credit, etc.)
- ❖ Intellectual (brand, patents, IP, copyright)
- ❖ Physical (equipment, inventory, buildings)

Key Partners

Key partners are the external companies or suppliers which will assist you perform your key activities. These partnerships are forged in order to scale back risks and acquire resources.

Types of partnerships are

- ❖ Strategic alliance: partnership between non-competitors
- ❖ Coopetition: strategic partnership between partners
- ❖ Joint ventures: partners developing a replacement business
- ❖ Buyer-supplier relationships: ensure reliable supplies

Cost structure

In this block, you identify all the prices related to operating your business model.

You'll got to specialize in evaluating the value of making and delivering your value propositions, creating revenue streams, and maintaining customer relationships. And this may be easier to try to do so once you've got defined your key resources, activities, and partners.

Businesses can either be cost-driven (focuses on minimizing costs whenever possible) and value-driven (focuses on providing maximum value to the customer).

Value propositions

This is the building block that's at the guts of the business model canvas. And it represents your unique solution (product or service) for a drag faced by a customer segment, or that makes value for the customer segment.

A value proposition should be unique or should vary from that of your competitors. If you're offering a replacement product, it should be innovative and disruptive. And if you're offering a product that already exists within the market, it should stand out with new features and attributes.

Value propositions are often either quantitative (price and speed of service) or qualitative (customer experience or design).

Foodtech startups have revolutionized the way Indians consume food. Customers can order whatever they need to eat, whenever they crave food, and from anywhere of their choice. With a valuation of \$3.3 billion, 1.4 lakh restaurants covered, active 2 lakh+ delivery personnel and a presence in 500 cities, Swiggy is one among the most important homegrown startups in India that delivers food to the purchasers.

From letting customers select a food item, getting the order ready, and eventually delivering it on time isn't a simple task. Dale Vaz, Head of Engineering & Data Science at Swiggy has empowered all stakeholders in its business ecosystem -- restaurants, drivers, and customers -- with technology to form the whole process smooth and seamless.

Applying Tech to Food

Vaz is decided to show Swiggy into an AI-first company. The start line for this has been to create an outsized data lake. Crucial data with reference to food preparation, delivery, and transactions is accumulated within the data lake, and actionable insights derived from it.

“We've done tons of labor to collect the info during a single place and build this data platform that permits us to create insights and models on top of it,” says Vaz.

The in-house software developed by Swiggy brings the restaurants, drivers, and customers all on an equivalent page to make sure complete visibility and efficiency into their business processes.

According to Vaz, timing is that the essence. Keeping a track of your time is imperative at every step -- when a customer orders, the restaurant starts its preparation to finding the proper driver to deliver it.

With machine learning algorithms, data from previous orders is processed to fetch insights on the precise time drivers will fancy travel from the customer location to the restaurant or the restaurant to the customer location, taking factors like timing of the day, festive season, weekends then on into consideration.

The company is additionally ready to predict what proportion time the restaurant will fancy prepare food.

Operations optimization models have also been built, which enable Swiggy to assign the simplest possible driver to a customer order while meeting constraints of delivery time and costs in real-time.

Though the corporate features a mixture of different machine learning and deep learning models, Vaz calls the system that predicts time period at the minute level key for Swiggy because the company provides a particular promise to customers.

Treating every Customer as Unique

For enhancing the search experience, Swiggy has built a custom AI model that ranks all the restaurants uniquely for each single customer. The list of restaurants is exclusive for every customer, matching his preference.

“The AI-model looks at not just your past orders but also things like affinity that a customer has towards a particular restaurant. So, we will say on the idea of the type of food you've got purchased within the past whether you'd prefer a south cornmeal over an Italian meal or the other way around,” avers Vaz.

The company has also wrapped intelligence into categorizing food on the idea of which it offers recommendations around dishes and restaurants that serve similar food.

Helping drivers and restaurants

Vaz's team has also built ML models for restaurants, which help them in managing inventory and forecasting supply for Swiggy orders. Vaz explains they are doing predictions on identifying what percentage dishes of a particular type are going to be sold during a given day. This information is shared with the restaurant to plan for the demand and optimize preparation.

To help drivers get more orders, a tool called Heat Map is made which predicts from which area subsequent orders will be available.

“With on the brink of 90 percent accuracy, Heat Map allows us to guide the waiting drivers to go for those particular areas where more orders are expected to return from”, adds Vaz.

Swiggy has also launched an ‘Access Program’ that helps restaurant partners choose and opening kitchens at new locations. Analytical models have allowed the corporate to spot locations with enough customers with the preference of a specific dish.

Creating a replacement revenue stream

Advertising is another business that Swiggy focuses on. the corporate has built an in-house tech stack which may be a highly scaled system that serves ads to many customers.

“Advertising benefits restaurants by allowing them to put targeted relevant ads for patrons. it's an excellent stream for us because it allows us to monetize our traffic and gain revenue,” says Vaz.

“AI-based model ensures the ads seen by customers are relevant to them. we do not show any spam or attempt to sell meaningless ads to customers,” he adds.

“If a number of our growth estimates come true, it won't take long before we'll be the third-largest source of employment in India,” said Majety.

While Majety didn't directly say what is going to cause the expansion over subsequent decade, he cited Pods and Swiggy Daily and Swiggy POP, among others, as current growth catalysts. Pods ask the Swiggy Access, a cloud kitchen business. Launched in November 2017, Swiggy Access allows its restaurant partners to line up kitchen spaces in neighborhoods where they don't currently operate, enabling expansion for its partners. Swiggy Daily allows users to schedule their meals beforehand or choose a daily, weekly or monthly subscription. Swiggy POP offers a curated menu of single-serve meals from neighborhood restaurants.

“We believe 75% of the demand will come from the availability which doesn't exist today,” said Majety, adding that today Swiggy is that the most often ordered service.

Swiggy has also been expanding beyond food. Last year, it acquired hyper-local delivery startup Supr Daily and has launched Swiggy Stores, a service to deliver home items like groceries, flowers,

medicines, among others, at a customer's doorstep. Last month, it launched Swiggy Go, a moment devours and drop service to ship packages anywhere across a city.

"We want to be the kings of convenience," said Majety.

Swiggy's investors believe the corporate can deliver on its "convenience offerings."

"Swiggy has been ready to significantly enhance its consumer base, usage frequency, brand and mindshare through product expansions like Swiggy Pop, Swiggy Access, Swiggy Stores, among several others. I think that Swiggy features a long runway of growth," said Niren Shah, director and therefore the head of Norwest India, an investor in Swiggy.

Industry experts, however, say, costs, particularly of delivery partners, will increase substantially within the coming years and wish to be taken under consideration for future forecasts.

"Minimum wages will become a reality. There might be rules that would put a tab on the load carried by e-commerce/food delivery partners. With the "Make in India" initiative, tons of children will attend the manufacturing industry. We are set to ascertain expensive labor force in future, which suggests companies will need to spend more on their on-ground staff," said Harminder Sahni, founder, and director, Wazir Advisors, a retail consulting company.

To be sure, for the year ended March 31, 2018, Swiggy's losses rose 93% to ₹397 crore. Its revenue grew 232% to ₹422 crore

2.2 Swiggy's success

Swiggy's success depends heavily on one thing – communication between all the relevant stakeholders. In an operation heavy business, the trick is to strike the proper balance between maintaining productivity while keeping the value low. Here's where Exotel comes in. As a cloud telephony platform, we provide them help them increase their productivity by taking care of the backend (scale, maintenance, up-times). the value also remains in restraint because our APIs offer them the pliability to unravel their most pressing communication problems. We play a neighborhood every step of the way within the order process.

What the customer experiences

A customer logs into the Swiggy app, picks a restaurant, places an order and waits for the order to be delivered. But there's tons that goes on behind the scenes to make sure that the whole process works smoothly.

Notifying the restaurant about the order

When an order is placed, restaurants sometimes don't realize that they need a replacement order waiting. To avoid any delays, Swiggy's team reminds restaurant about new orders as they are available in. But manually calling and confirming every order with the restaurant isn't a scalable solution. Automated calls helped save on manual work. When an order is placed, the restaurant gets an automatic call with the order notification. This automated call helps reduce delivery delays.

“Automated calls have helped in increasing our service levels and reducing our costs since there is no need for any manual intervention. It has helped us in reducing manual calls to restaurants significantly”

Operations & Strategy, Swiggy

Delivery process – Safeguarding customer privacy (number masking)

The delivery person calls the customer during a few instances – problems with finding the address, to tell the customer once they reach the situation or if there are any unexpected delays. While all of the above are legitimate circumstances, this also means sharing the customer’s telephone number with the delivery agent. Number masking allows the agent to succeed in the customer over a call just in case they have to without having access to their telephone number.

How this works

The delivery person clicks on the decision button within the Swiggy app. supported the order number, the decision is connected to the proper customer by Exotel’s system. Simple as that!

“Number masking has helped us give our customers a seamless experience by ensuring we never compromise our customer information. This has been a huge advantage for us”,

Operations & Strategy, Swiggy

Verify Cash on Delivery Orders

Cash on delivery orders are always tricky. Sometimes, the orders are refused after a delivery agent shows up with the food. To avoid misuse on COD orders, Swiggy uses Exotel’s automated IVR calls to reconfirm the order with the customer. When a COD order comes in, Swiggy places an automatic IVR call via Exotel. supported the IVR prompt, the customer is required to verify the order by pressing the relevant key on his dial-pad. This additional confirmation step helps comb out bogus orders.

Tech solution to hiring problems

Technology might not always appear to be the primary option to solve problems in areas like hiring and marketing. But, at Exotel, we’ve seen how simple tech solutions can solve seemingly large problems with ease. And here are a few of examples. Hiring delivery personnel may be a task that’s tough. It is also an on-going activity for the Swiggy team. The demand for delivery personnel is usually high. So, once they procure an inventory of potential candidates, an automatic call with a couple of relevant questions may be a simple thanks to assess interest levels before going forward.

“We can now easily upload a list of numbers, set a date and time for the IVR to happen and not worry about it. It also enables us to collect responses from the person on the other end of the call”

2.3 Consumer preference

In a web Marketplace Business, there's an abundance of competition amongst brands striving for consumer preference — with their product offerings, strategic pricing, and consumer engagement. And, from the consumer's side, in line with Pareto's principle, a serious portion of the buyer base shows an affinity towards a comparatively smaller subset of the brands on the platform. For a web Marketplace Business like Swiggy, it's of utmost importance to exactly identify the brands that buyers love and convey them even closer to the consumers.

Why identifying consumer's brand affinity is crucial

[Top-line] Improving revenue through consumer stickiness: Improving coverage/availability of those brands would ensure customer locking to the platform

[Bottom-line] Improving profitability: Consumers are able to pay a premium for a brand they love. Identifying these brands would be a step towards improving ticket size on the platform while keeping consumer conversion on the platform in restraint

Customer experience: Customers love brands because they supply great quality and knowledge. Making these brands easily accessible on the platform is sure to improve customer experience on the platform

There is an abundance of knowledge available to conventionally identify these 'best brands' or 'the brands that buyers love' within the market. It could range from the ratings and feedback available on your own platform to all or any social media reviews across the online including the likes of Google, Facebook, Twitter etc.

But the question is, do these conventional methods accurately capture consumer's love for a brand, relevant for an aggregator business? Let's explore what's lacking in these traditional approaches

Noise in in-house ratings: In a web aggregator business, aside from the standard of the products/services, ratings, also are a function of aspects like delivery, packaging and therefore the overall experience of ordering. These together cloud the particular product/service rating

Noise in external reviews: Social media ratings/reviews for offline services include other dynamics like aesthetics, presentation, ambience, wait-time, etc. which could often be ambivalent for online services

Varying baseline: Baseline level on a Kelvin scale of ratings differ from consumer to consumer

Small sample size: Average star ratings are often supported insufficient sample sizes but, consumers trust them anyway

Biased rating: Quality being constant, expensive products and prevalent brands tend to urge higher ratings

While these conventional methods provide a straight-forward approach for identifying the simplest brands on the platform, the variabilities involved skew the result. Moreover, these conventional methods are a ‘representation of the outcome’ and miss out on capturing the intent of the buyer i.e. — how and why a choice was made.

Knowing that buyers like better to order from the brands that they love, the question that must be answered is how can we quantify consumer’s love for Brands? What are the signals that buyers relay while placing an order? To answer this, there was a requirement for a framework that focused on the journey of a consumer to succeed in order. In other words, taking a consumer backward approach to spot their affinity towards specific brands.

To address this, we designed a framework to segregate consumer journeys on a platform into high and low intent, which successively quantifies the consumer’s brand preference.

Identifying order Intent through Consumer Touchpoints/Journeys:

What are the broad categories of consumer touch-points/journeys that help us identify their intent?

Based on consumers interaction on the platform, these journeys were weakened into 3 categories:

Pre-order: Browse/Explore to order behavior — This focuses on how the selection was made. Was it a selected choice that the buyer made?

During order: This focuses on the attribute of the order placed like order category, order value, etc. Was the buyer able to pay higher? Did the buyer have already got a perception of the brand?

Post-order: Repeat Interactions with brands on the platform, post order fulfilment. Did a past interaction with a brand influence consumer behavior on the platform?

Each consumer order might be mapped to multiple journeys mentioned above, hence to form them mutually exclusive these journeys were ranked basis priorities. for instance — an order might be marked as ‘Order from Search’ also as “Faster Re-Order”. during this case, basis priority, the order was categorized as ‘Order from Search’.

These marked orders are coined as ‘High Intent Orders’ which suggests, the buyer journeys for these orders show a high intent to order from a preferred brand. Percentage of such ‘High Intent Orders’ at a Brand level has been defined because the brand’s Consumer Affinity Score (CAS). Higher the CAS, higher is that the ‘Consumer Love’ for that specific brand.

To make this score highly robust and readily consumable at a platform level, there was a requirement for a few cleansing and wrangling -

Outlier treatment: it had been possible for a brand with extremely low orders to possess a really high Consumer Affinity score. to deal with this, rock bottom 20 percentile brands basis contribution to platform orders were removed

Scaling: The range of CAS varied across cohorts like cuisines, cities, etc. so, there was a requirement to scale these scores at a cohort level as applicable. due to the hyperlocal nature of the business, here, decaling was done across multiple cohorts

How can Consumer Affinity Score benefit across Businesses?

Identifying the gaps across various cohorts' basis average CAS score, and filling those voids with these high CAS brands would ensure scalable business growth and consumer's stickiness to platform

Differential treatment for these high CAS brands that have already got a scale, would help improving consumer experience and profitability on platform

Strategic Partnership with these high CAS brands could help in consumer acquisition also as locking to the platform

A brand's worth for a platform is merely the maximum amount because the consumers value it. While all the normal approaches serve their purpose as a feedback circuit for brands to enhance, those methods have their own challenges when it involves defining a uniform and noise-free measure.

This approach moves faraway from 'what consumers are saying' to 'what consumers are doing' — a key distinction that differentiates between perceived and realized the worth of a brand. The brand affinity score isn't intended to assist consumers choose a brand but to assist aggregator businesses choose brands that are most precious, supported how consumers interact with them. the precise consumer interactions that indicate higher intent or 'love' for a selected brand may vary from platform to platform, but including 'the journey' as a part of the measurement framework are some things businesses tend to overlook.

Analysis — Swiggy

Opportunities & threats (Swiggy) — Swiggy, being the primary online platform for food delivery, was the innovator of this service. Swiggy features a good number of potential customers which makes it an enormous a part of the growing marketplace. it's an excellent opportunity if it can find ways to include more services in its operations.

Having few customers when new competitors like Amazon are on the increase could impose a big threat to Swiggy. It could have an excellent impact on their profits also as sales figures. Moreover, with this prevailing worldwide pandemic, people are becoming more health-conscious day by day. If it doesn't prioritize cleanliness, it might be an excellent threat to the brand.

1) Offer a brief & concise menu — Bigger isn't always the higher, a brief and concise menu would assist you add more value and simplify the method for patrons. it's customer-friendly and helps to make a decision their order easily.

2) Use attractive photos — Use photos that instantly increase your customers' hunger and lure them to put an order. Photos easily influence customers and make a compulsion to form a sale.

3) Add specials to your menu — First, you want to understand the preferences of your customers. Accordingly, add new and unique dishes to your menu. Customers, especially the young ones, are more curious about trying out new flavors.

4) Recommend your best dishes — Swiggy uses their recommendation engine to point out the purchasers the simplest available dishes whereas Zomato allows you to mark recommendations on your own. Recommending is one among the simplest ways to encourage your customer to form a sale, but you want to consider your customer's preferences and availability of resources.

Promotion strategies (Swiggy)

1) Use Swiggy POP — Swiggy offers POP meals for its customers with free delivery. It offers dishes that range from Rs.99-Rs.200 to customers who are located during a fixed radius. It allows you to feature low-budget items on the POP list and encourage them to undertake other items from your menu.

2) Promote with Banner Ads — Banner Ads are one among the foremost efficient strategies when it involves promoting restaurants. These are rectangular Ad boxes which when clicked direct the user to the restaurant page. If used properly, they will convince be quite useful in increasing your traffic and sales.

3) Offer combos & discounts — Offering discounts and combos to customers assist you to maximize your sales. once you group items up, it helps you to supply a spread of dishes at a relatively lower cost. This increases customer satisfaction and successively, your sales.

Swiggy entered into a partnership with Snapchat for 6 months last year to extend their user base, cater to a replacement set of audience and explore new ways of selling.

Tarika Soni, Head of economic Strategy and Ad Monetization for India, Snapchat, shares how Snapchat helped Swiggy deliver the proper messaging to Gen Z, what parameters were applied while choosing the ad formats on Snapchat, and why the delivery giant chose to increase the partnership with the platform.

Swiggy, a web food delivery platform, wanted to extend its user base and cater to a replacement set of audience. during a 6-month-partnership with Snapchat in 2019, Swiggy explored its ad format that helped it deliver 11,000 plus new food orders monthly at rock bottom cost per customer acquisition.

Explaining why Swiggy chose Snapchat, Sudeep Bansal, AVP - Marketing, Swiggy, said, "At Swiggy, we are always on the lookout to check new platforms to expand our customer base. By partnering with Snapchat, we were successfully ready to reach incremental Gen Z's in densely populated urban areas leading to a better number of latest users from this super relevant user segment. Snapchat Story and Snap ads proved to be an efficient and efficient platform allowing us to spice up our performance campaigns and showcase our creative prowess."

Swiggy tests and invests in partners supported the performance of a publisher through various parameters like average order value, frequency of order, coupon redemption and sort of restaurant chosen for delivery.

Sharing why Snapchat may be a good bait for advertisers, Tarika Soni, Head of economic Strategy and Ad Monetization for India, Snapchat, said, "We are excited to partner up with Swiggy and find innovative ways to interact with their core audience by delivering the foremost relevant message at the proper time through our story and snap ads. Snapchat has an inherent advantaged to drive recency and relevance by maximizing the number of opportunities during a given day which will deliver a message because our users open our app 20 times per day on the average and spend over half-hour from once, they awaken, to once they commute, to when they're shopping and getting to sleep — these all represent opportunities to deliver the proper ad message."

Campaign results:

Swiggy has been using Snapchat's ad platform for over a year now and are still accept 'always on' programmatic performance campaigns using 'Story and Snap ad placements' to deliver positive results.

Impact:

Swiggy witnessed an 18% growth in 1st orders during June 2019 to December 2019 and approximately 49% increase in 1st orders in comparison to June 2018 to December 2018.

A minimum of 11k+ new orders were delivered monthly.

The company selected "being there for love or money the consumers needed right from sanitizers to pizzas", says TS Srivats, vice chairman, marketing, at Swiggy, while sharing the brand journey within the previous couple of months.

The lockdown during the previous couple of months brought mixed news for food delivery brand Swiggy. While the first months of Covid-19 were an intense phase with the brand trying to beat countless challenges to stay the operations optimally running, the easing of the lockdown July onwards brought back demand and resurgence. Accordingly, the brand pivoted its offering and added the layer of trust and safety to its existing aggregator model of restaurants also as expanded beyond its core offering of food delivery.

Safety - the necessity of the hour

The initial phase of the pandemic months saw a dip within the number of restaurants that were operational and also the number of orders being placed. To combat the fear factor and also reinstate the buyer confidence, key safety practices like no-contact delivery increased delivery partner hygiene, and best safety standards tags for restaurants were introduced while also communicating these measures and therefore the right food handling practices to the consumers. Over time, through the WHO and other sources, consumer awareness around food ordering has spread,

leading to a resurgence of demand. More recently, the cricketing and festive season added to the surge in orders.

Consumers are seeking brands that they will depend on with none worries, especially with safety, hygiene and reliability taking precedence altogether brand engagements, says Srivats.

Pivoting the business model beyond 'food delivery'

The 'new' normal made brands across categories look beyond their existing core offerings and appearance at the new hotspots of demand. A nimble-footed Swiggy also launched new offerings like Swiggy Instamart and Health Hub, also as rapidly expanded services like Swiggy Genie.

Swiggy Genie may be a new offering that was launched to let consumers devour anything from groceries to laundry to sending across home-cooked food or supplies to friends and family. "We have seen Genie is additionally helping small business owners deliver goods to their customers, right from small cafes and restaurants to boutiques." it's been received well, and currently it's present in 65 cities within the country, shares Srivats.

Swiggy's Instamart offering was launched with the USP: instant delivery of groceries and daily essentials within 30-45 minutes to cater to the requirements of time-pressed, convenience seeking urban consumers. The hyperlocal delivery offering has unlocked a replacement dimension of convenience within the times of social distancing for consumers also as earnings for the delivery partners, shares Srivats.

Other newer subcategories identified to fill need gaps include Swiggy HealthHub, where Swiggy collaborated with leading restaurants to help them in creating delectable healthy options of popular dishes.

Repositioning the communication strategy

From a marketing point of view, this was a period when the kinds of initiatives we undertook and therefore the refore the campaigns we ran were focused on doing our bit for the consumers and the restaurant and delivery partner ecosystem, instead of traditional brand campaigns, says Srivats. All throughout the crisis, the communication was crafted keeping the buyer sentiment in mind. The pre-lockdown and early lockdown focused on the hygiene and safety precautions, later moving to convey the consumers how ordering-in is safe and what precautions might be followed.

For example, in an attempt to support the severely impacted restaurant industry, Swiggy launched the 'At Your Service' campaign. Promoted mainly through its social channels, the target was to instill trust amongst the consumers and encourage them to support their local restaurants by ordering-in or to assist the restaurant community recover.

Another initiative, 'Food shop on Instagram' was launched which comprised Instagram filters with food dishes with patrons sharing their 'lockdown miseries' about missing their favorite dish or restaurants using various filters.

The unlock phase and beyond

In the unlock phase, the communication gradually turned to winning back the consumers' trust and reminding them of the familiar and pleasant Swiggy experience. Additionally, to paying tribute to the delivery partners' heroic efforts during the challenging times, Swiggy collaborated with Universal Music India and Havas group to launch 'Shukriya Kare' - a thank-you anthem for all delivery partners of Dunzo, Grofers, Medlife and Swiggy.

Recently, the brand was also back with its quirky and well-crafted IPL (Indian Premier League) campaign comprising TV adverts also as contests and games, and exciting offers through the season.

A brand with a heart

The 'Hope not Hunger' campaign was launched to assist the needy. As a neighborhood of this initiative, Swiggy partnered with various commercial kitchens, NGOs and state governments to supply daily meals to thousands of underprivileged, daily wagers and stranded migrant laborers who had limited access to nutritious food during the 21-day lockdown in April. "We raised over Rs 10 crore and distributed over 30 lakh meals to people in need during the period", informs Srivats.

The 2020 report

Thanks to a resurgent demand and a repositioned go-to-market offering, Swiggy is once more on a robust wicket. As per Srivats, "the pan India food delivery has nearly recovered to the pre-Covid order value. In many markets, it's at 95%, some even over 100%." With offices resuming operations, the brand expects an uptick in orders placed from work, with a number of the office going populace to migrate back to the metros. Additionally, Swiggy witnessed a 30% increase in orders during the cricketing season this year, he adds.

The big marketing lesson learnt

Shares Srivats, "Consumers gravitate to brands they trust in times of a crisis. Times like these are a litmus test for the worth and trust of any business. With the backing of technology, logistic prowess and a deep understanding of hyper-local trends the brand managed to emerge as an important service during the lockdown and subsequent unlock phases. As we approach full recovery, we are focused on strengthening our offerings and dealing towards enabling greater convenience for our users."

Target Audience

Swiggy's main audience is that the 18-35 demographic, which has quick access to a smartphone, is fluent with using apps to urge services and appears towards online platforms to fulfil their daily necessities. This includes students who cannot cook on their own and dealing professionals who face hunger pangs during office hours. This also includes people that have migrated for white-

collar jobs and don't have an area to cook their own meals and families preferring to skip cooking on certain days and order their food.

Marketing Strategies

Search Engine Optimization

Search Engine Optimization helps improve your website rankings on the program results pages (SERP's). For a brand to rank organically high, it's important to possess an honest SEO strategy.

Swiggy has really worked hard on its program Optimization's you'll see from the SEO audit report from Woorank, the house page of Swiggy website has an appropriate meta title which incorporates their main keywords like 'food', 'online', 'food delivery', 'order', and restaurants near you'. They have an honest meta description that has the names of the favored cities that they operate in also as their hottest restaurant partners. They use one H1 append the house page, which enables the search engines to understand about the most topic of the page. Their backlink score is sweet too, with an excellent mixture of inbound and outbound links. Also, they need no broken links on their website. They also redirect their traffic from non-preferred domains to their preferred domain. They have an up-to-date sitemap, which helps the search engines to work out the layout of the location.

Considering of these points, we will see that Swiggy has made tons of efforts to make sure that their webpages are program friendly. When the search engines are hungry (pun intended) for information about the domain, they're bound to get their fill.

Social Media Marketing

As of July 2019, Swiggy has 139k followers on Instagram, 80k followers on Facebook and 79.8k followers on Twitter. How has it managed to realize such a huge following? Let's dissect it

What sets Swiggy aside from its competitors is their remarkable social media campaign strategies. within the past, it's come up with brilliant campaigns like #eatyourveggies, #earnyourcheatmeal & #superswiggy, where they convey the notion of healthy eating during a humorous way by using puns and witty one-liners.

When they aren't running campaigns, they use enticing food images on Instagram. Their purpose is to form people crave good food. If people want delicious food, they're going to check out Swiggy to deliver it to them.

Email Marketing

Swiggy features an excellent email marketing strategy in situ. It sends users tons of coupon codes that give discounts. the topic lines are very clickbait. The visuals within the emails also are very enticing. They also make use of current affairs and events to send humorous emails. Such emails make sure that a high number of individuals open their emails. These emails give various reasons to customers to order from Swiggy. this is often how successful email strategies must be thought of.

Paid Advertising

Swiggy runs Google text ads and Display Ads to focus on people trying to find food. They also run Facebook ads to focus on users.

These ads appear before their audience and provides them differently to steer people onto their website or app. After analyzing all this, here are a couple of suggestions from Devesh Shah, a student at IIDE:

The Good

Swiggy has been creating tons of witty posts that increase engagement on social media. Their email marketing takes current affairs into consideration and emails that leave are humorous, witty and visually appealing. Their YouTube videos attempt to give more reasons to people to order from Swiggy. All this, combined with their paid advertising on Google and Facebook make sure that they get new users and that they keep getting repeat customers also.

The Bad

One thing that would improve on is that they might post different creatives on Facebook and Twitter. Posting an equivalent creative on different platforms might not work so well. Each platform is independent and targets different people. Hence, it's always advisable to possess separate strategies and creatives for them.

Swiggy Digital Marketing strategy will be got to keep evolving because the digital landscape undergoes a change. As Swiggy looks towards expanding in newer markets, it'll need to keep finding innovative ways to succeed in users in these cities. they're doing an exquisite job now, and if they keep transforming their online marketing consistent with the newest trends, they're going to keep getting good results from their efforts.

What does one believe Swiggy's online marketing? How does one think they will improve it? Do allow us to know within the comments below.

If you would like to understand about other brands and the way they need been approaching their Digital Marketing, you'll have a glance at them here.

Online food delivery platform Swiggy has launched a series of television commercials and digital videos, that reflect the evolving food culture in Indian homes. With a tagline 'Ghar Ka Khaana, Saath Mein Thoda Swiggy!', these light-hearted TVCs plan to strike a chord with most Indian families today, where consumers like their homecooked meals but also anticipate to an exciting element that enhances their routine.

Conceptualized in partnership with Lowe Lintas, the advertising campaign focuses on how consumers can complement their favorite food made reception with food they love ordered on Swiggy to elevate their meals.

Srivats TS, vice-president – marketing, Swiggy says, “Swiggy’s TVCs have consistently communicated to consumers in extremely relatable ways. As a category creator, we’ve taken consumers through a whole food-ordering journey through our ads. From our ‘What a delivery’ IPL ads to the ‘Swiggy Karo Phir Jo Chahe Karo’ campaigns, we’ve broken the clutter of discount-focused ads. The ‘Ghar ka Khaana, Saath Mein Thoda Swiggy!’, the campaign is all about celebrating your meals together with your family while adding the Swiggy touch with an additional something- be it an additional dish, entremots or desserts. it’s an ideal vehicle to blend an age-old tradition with new ones.”

“As Indians we all love home-made food. That said, there are myriad combinations and add-ons to our dishes which will enhance the general meal experience. That’s where Swiggy comes in. To order that one extra delight. As always, we’ve ensured we’ve a slice of life food moments that are relatable yet nuanced,” says Sagar Kapoor, chief creative officer, Lowe Lintas.

Staying faithful Swiggy’s sort of short but impactful commercials, the 25-second videos are crammed with subtle humor and tongue-in-cheek dialogues. The TVCs explore a day scenario, instantly striking a chord with the audience. Swiggy’s TVCs became one among the foremost looked forward to ads due to their fun and relatable nature, especially after the success of its hugely popular IPL-themed TVCs.

Apart from Hindi, the TVCs are going to be filmed and aired in languages like Bengali, Kannada, Malayalam, Tamil, Telugu, and Marathi across General Entertainment Channels (Hindi and regional) like Sports Channels, English Movies, Hindi movies, Hindi Music etc. The campaign also will run on Swiggy’s digital channels.

Chapter 3

RESEARCH METHODOLOGY

Chapter 3 RESEARCH METHODOLOGY

Research is an integral a part of every small and large business. it's important for a corporation to seem into new areas and find new ways to expand their business. Research are often defined as a scientific approach to review new fields, new material, or to seem for brand spanking new dimensions in an existing field.

Research methods and research methodology are the 2 terms related to research which are confused by many of us.

The research method is research methods are wont to define the subject of the research and to determine a deeper understanding about it whereas, research methodology may be a systematic approach to gather and evaluate data within the research process.

Let us study both these terms intimately and also find out how these terms are different from one another.

What is research methodology

The research methodology is mentioned the study of methods and to determine an understanding of why these methods were used for the research. Research methodology provides a logical explanation behind the steps taken within the research.

Research methodology explains the means using which ends up were obtained within the research.

Research methodology provides guidance for the research process. the most objectives of research methodologies are concerned with the subsequent aspects:

Suitable research methods for the research problem.

Determine the accuracy of the result of opted research methods.

And, finally, to form sure that research methods are efficient enough.

A well-defined methodology gives an evidence why a specific research methodological approach is employed for the research, in what order and the way research methods were applied to urge the results of the research, what were the info collection methods, and explain the info analysis and procedures thoroughly.

Research method

The research method consists of all the techniques and method which are employed by a researcher during a research process to seek out the answer to the research problem. the only purpose of research methods is to seek out the answer.

Research methods are often of two types qualitative research methods and quantitative research methods.

Qualitative research methods

The qualitative research method consists of open-ended and conversational research methods. The qualitative research method is employed to gather in-depth and detailed data about the research topic.

Qualitative research methods are designed in such how that reveals about the behavior and perception of individuals under research.

Data collected from qualitative research methods are descriptive. Therefore, it's easy to draw inferences from it. Qualitative research methods are widely utilized in the social and behavioral sciences.

Methods sort of a focus group, one-on-one interviews, case study research, ethnographic research, observation research, and record-keeping are the varied methods utilized in qualitative research.

Quantitative research methods

Quantitative research methods are those methods where a scientific approach is employed to gather quantifiable of knowledge by performing computational, mathematical, or statistical techniques. the info collected through quantitative research methods are usually in numerical form.

The proper outcome is often deduced by analyzing the info during a systematic form. The results obtained through quantitative research methods are statistical, logical, and unbiased.

These research methods are applied to a gaggle of the population, which represents the whole population.

Methods like survey research, cross-sectional surveys, longitudinal surveys, correlational research, causal-comparative research, experimental research, are primary data collection methods in quantitative research methods whereas the info collected from methods like educational institutions, public libraries, data available on internet, government and non-government resources, and commercial information resources, etc. are the secondary data collection methods in quantitative research methods.

Types of Research Methods consistent with the aim of the Study

According to the aim of the study, sorts of research methods are often divided into two categories: applied research and fundamental research. Applied research is additionally mentioned as an action research, and therefore the fundamental research is usually called basic or pure research. The table below summarizes the most differences between applied research and fundamental research. Similarities between applied and fundamental (basic) research relate to the adoption of a scientific and scientific procedure to conduct the study.

Applied research

Applied research “aims at finding an answer for an instantaneous problem facing a society, or an industrial/business organization, whereas fundamental research is especially concerned with generalizations and with the formulation of a theory”. Applied research is taken into account to be non-systematic inquiry and it's usually launched by a corporation, agency or a private so as to deal with a selected problem.

Fundamental research

Fundamental research, also referred to as basic research or pure research doesn't usually generate findings that have immediate applications during a practical level. Fundamental research is driven by curiosity and therefore the desire to expand knowledge in specific research area. this sort of research makes a selected contribution to the tutorial body of data within the research area.

Fundamental studies tend to form generalizations about the phenomenon, and therefore the philosophy of this sort of studies are often explained as ‘gathering knowledge for the sake of knowledge’. Fundamental researches mainly aim to answer the questions of why, what or how and that they tend to contribute the pool of fundamental knowledge within the research area.

Types of Research Methods consistent with Research Design

On the idea of research design the kinds of research methods are often divided into two groups – exploratory and conclusive. Exploratory studies only aim to explore the research area and that they don't plan to offer final and conclusive answers to research questions. Conclusive studies, on the contrary, aim to supply final and conclusive answers to research questions.

Exploratory research

Exploratory research, because the name implies, intends merely to explore the research questions and doesn't shall offer final and conclusive solutions to existing problems. this sort of research is typically conducted to review a drag that has not been clearly defined yet.

Conducted so as to work out the character of the matter, exploratory research isn't intended to supply conclusive evidence, but helps us to possess a far better understanding of the matter. When conducting exploratory research, the researcher needs to be willing to vary his/her direction as a result of revelation of latest data and new insights.

Exploratory research design doesn't aim to supply the ultimate and conclusive answers to the research questions, but merely explores the research topic with varying levels of depth. it's been noted that “exploratory research is that the initial research, which forms the idea of more conclusive research. It can even help in determining the research design, sampling methodology and data collection method” Exploratory research “tends to tackle new problems on which little or no previous research has been done”. Unstructured interviews are the foremost popular primary data collection method with exploratory studies.

Conclusive research

Conclusive research design, because the name implies, is applied to get findings that are practically useful in reaching conclusions or decision-making. during this sort of studies research objectives and data requirements got to be clearly defined. Findings of conclusive studies usually have specific uses. Conclusive research design provides how to verify and quantify findings of exploratory studies.

Conclusive research design usually involves the appliance of quantitative methods of knowledge collection and data analysis. Moreover, conclusive studies tend to be deductive in nature and research objectives in these sorts of studies are achieved via testing hypotheses.

Hypotheses

A hypothesis may be a specific statement of prediction. It describes in concrete (rather than theoretical) terms what you expect will happen in your study. Not all studies have hypotheses. Sometimes a study is meant to be exploratory (see inductive research). there's no formal hypothesis, and maybe the aim of the study is to explore some area more thoroughly so as to develop some specific hypothesis or prediction which will be tested in future research. one study may have one or many hypotheses.

Actually, whenever I mention a hypothesis, I'm really thinking simultaneously about two hypotheses. Let's say that you simply predict that there'll be a relationship between two variables in your study. The way we might formally found out the hypothesis test is to formulate two hypothesis statements, one that describes your prediction and one that describes all the opposite possible outcomes with reference to the hypothesized relationship. Your prediction is that variable A and variable B are going to be related (you don't care whether it's a positive or negative relationship). Then the sole other possible outcome would be that variable A and variable B aren't related. Usually, we call the hypothesis that you simply support (your prediction) the choice hypothesis, and that we call the hypothesis that describes the remaining possible outcomes the null hypothesis. Sometimes we use a notation like H_A or H_1 to represent the choice hypothesis or your prediction, and H_0 or H_0 to represent the null case. you've got to take care here, though. In some studies, your prediction might alright be that there'll be no difference or change. during this case, you're essentially trying to seek out support for the null hypothesis and you're against the choice.

If your prediction specifies a direction, and therefore the reform the null therefore is that the no difference prediction and the prediction of the other direction, we call this a one-tailed hypothesis.

Variables

You won't be ready to do considerably in research unless you recognize the way to mention variables. A variable is any entity which will combat different values. OK, so what does that mean? Anything which will vary are often considered a variable. as an example, age is often considered a variable because age can take different values for various people or for an equivalent person at different times. Similarly, country is often considered a variable because a person's country is often assigned a worth.

Variables aren't always 'quantitative' or numerical. The variable city consists of text values like Network or Sydney. We can, if it's useful, assign quantitative values rather than (or in situ of) the text values, but we don't need to assign numbers so as for something to be a variable. It's also important to understand that variables aren't only things that we measure within the traditional sense. as an example, in much social research and in program evaluation, we consider the treatment or program to be made from one or more variables (i.e., the cause' are often considered a variable).

an academic program can have varying amounts of ‘time on task’, ‘classroom settings’, ‘student-teacher ratios’, and so on. So even the program is often considered a variable (which are often made from variety of sub-variables).

An attribute may be a specific value on a variable. as an example, the variable sex or gender has two attributes: male and feminine. Or, the variable agreement could be defined as having five attributes:

1 = strongly disagree

2 = disagree

3 = neutral

4 = agree

5 = strongly agree

Another important distinction having to try to to with the term ‘variable’ is that the distinction between an independent and variable. the experimental variable is what you (or nature) manipulate – a treatment or program or cause. The variable is what's suffering from the experimental variable – your effects or outcomes. for instance, if you're studying the consequences of a replacement program on student achievement, the program is that the experimental variable and your measures of accomplishment are the dependent ones.

Time in Research

Time is a crucial element of any research design, and here I would like to introduce one among the foremost fundamental distinctions in research design nomenclature: cross-sectional versus longitudinal studies. A cross-sectional study is one that takes place at one point in time. In effect, we are taking a ‘slice’ or cross-section of whatever it's we're observing or measuring. A longitudinal study is one that takes place over time – we've a minimum of two (and often more) waves of measurement during a longitudinal design.

A further distinction is formed between two sorts of longitudinal designs: repeated measures and statistic. there's no universally prescribed rule for distinguishing these two terms, but generally, if you've got two or a couple of waves of measurement, you're employing a repeated measures design. If you've got many waves of measurement over time, you've got a statistic. what percentage is ‘many’? Usually, we wouldn't use the term statistic unless we had a minimum of twenty waves of measurement, and sometimes much more. Sometimes the way we distinguish these is with the

analysis methods we might use. statistical analysis requires that you simply have a minimum of twenty approximately observations. Repeated measures analyses aren't often used with as many as twenty waves of measurement.

Types of Research Questions

There are three basic sorts of questions that research projects can address:

Descriptive. When a study is meant primarily to explain what's happening or what exists. popular opinion polls that seek only to explain the proportion of individuals who hold various opinions are primarily descriptive in nature. as an example, if we would like to understand what percent of the population would vote for a Democratic or a Republican within the next presidential election, we are simply curious about describing something.

Relational. When a study is meant to seem at the relationships between two or more variables. A popular opinion poll that compares what proportion of males and females say they might vote for a Democratic or a Republican candidate within the next presidential election is actually studying the connection between gender and voting preference.

Causal. When a study is meant to work out whether one or more variables (e.g., a program or treatment variable) causes or affects one or more outcome variables. If we did a popular opinion poll to undertake to work out whether a recent political ad campaign changed voter preferences, we might essentially be studying whether the campaign (cause) changed the proportion of voters who would vote Democratic or Republican (effect).

The three question types are often viewed as cumulative. That is, a relational study assumes that you simply can first describe (by measuring or observing) each of the variables you're trying to relate. And, a causal study assumes that you simply can describe both the cause-and-effect variables which you'll show that they're associated with one another. Causal studies are probably the foremost demanding of the three.

Sampling:

Sampling is defined because the process of choosing certain members or a subset of the population to form statistical inferences from them and to estimate characteristics of the entire population. Sampling is widely employed by researchers in marketing research in order that they are doing not got to research the whole population to gather actionable insights. it's also a time-convenient and an economical method and hence forms the idea of any research design.

For example, if a drug manufacturer would really like to research the adverse side effects of a drug on the population of the country, it's on the brink of impossible to be ready to conduct a search study that involves everyone. during this case, the researcher decides a sample of individuals from

each demographic then conducts the research on them which provides them an indicative feedback on the behavior of the drug on the population.

Types of Sampling: Sampling Methods

Any marketing research study requires two essential sorts of sampling. They are:

Probability Sampling: Probability sampling is a sampling method that selects random members of a population by setting a couple of selection criteria. These selection parameters allow every member to possess the equal opportunities to be a neighborhood of varied samples.

Non-probability Sampling: Non probability sampling method is reliant on a researcher's ability to pick members randomly. This sampling method isn't a hard and fast or pre-defined selection process which makes it difficult for all elements of a population to possess equal opportunities to be included during a sample.

In this blog, we discuss the varied probability and non-probability sampling methods which will be implemented in any marketing research study.

Types of Sampling: Probability Sampling Methods

Probability Sampling may be a sampling technique during which sample from a bigger population are chosen employing a method supported the idea of probability. This sampling method considers every member of the population and forms samples on the idea of a hard and fast process. for instance, during a population of 1000 members, each of those members will have 1/1000 chances of being selected to be a neighborhood of a sample. It gets obviate bias within the population and provides a good chance to all or any members to be included within the sample.

There are 4 sorts of probability sampling technique:

Simple Random Sampling: one among the simplest probability sampling techniques that helps in saving time and resources, is that the Simple sampling method. it's a trustworthy method of obtaining information where every single member of a population is chosen randomly, merely accidentally and every individual has the precise same probability of being chosen to be a neighborhood of a sample.

For example, in a corporation of 500 employees, if the HR team decides on conducting team building activities, it's highly likely that they might prefer picking chits out of a bowl. during this case, each of the five hundred employees has a civil right of being selected.

Cluster Sampling: Cluster sampling may be a method where the researchers divide the whole population into sections or clusters that represent a population. Clusters are identified and included during a sample on the idea of defining demographic parameters like age, location, sex etc. which makes it extremely easy for a survey creator to derive effective inference from the feedback.

For example, if the govt of the us wishes to gauge the number of immigrants living within the Mainland US, they will divide it into clusters on the idea of states like California, Texas, Florida, Massachusetts, Colorado, Hawaii etc. this manner of conducting a survey is going to be simpler because the results are going to be organized into states and provides insightful immigration data.

Systematic Sampling: Using systematic sampling method, members of a sample are chosen at regular intervals of a population. It requires selection of a start line for the sample and sample size which will be repeated at regular intervals. this sort of sampling method features a predefined interval and hence this sampling technique is that the least time-consuming.

For example, a researcher intends to gather a scientific sample of 500 people during a population of 5000. Each element of the population is going to be numbered from 1-5000 and each 10th individual is going to be chosen to be a neighborhood of the sample (Total population/ Sample Size = $5000/500 = 10$).

Stratified Random Sampling: Stratified sampling may be a method where the population are often divided into smaller groups, that don't overlap but represent the whole population together. While sampling, these groups are often organized then draw a sample from each group separately.

For example, a researcher looking to research the characteristics of individuals belonging to different annual income divisions, will create strata (groups) consistent with annual family income like – but \$20,000, \$21,000 – \$30,000, \$31,000 to \$40,000, \$41,000 to \$50,000 etc. and other people belonging to different income groups are often observed to draw conclusions of which income strata have which characteristics. Marketers can analyze which income groups to focus on and which of them to eliminate so as to make a roadmap that might definitely bear fruitful results.

Use of the Probability Sampling Method

There are multiple uses of the probability sampling method. They are:

Reduce Sample Bias: Using the probability sampling method, the bias within the sample derived from a population is negligible to non-existent. the choice of the sample largely depicts the understanding and therefore the inference of the researcher. Probability sampling results in higher quality data collection because the population is appropriately represented by the sample.

Diverse Population: When the population is large and diverse, it's important to possess adequate representation in order that the info isn't skewed towards one demographic. for instance, if Square would really like to know the folks that could their point-of-sale devices, a survey conducted from a sample of individuals across US from different industries and socio-economic backgrounds, helps.

Create an Accurate Sample: Probability sampling helps the researchers plan and make an accurate sample. This helps to get well-defined data.

Types of Sampling: Non-probability Sampling Methods

The non-probability method may be a sampling method that involves a set of feedback on the idea of a researcher or statistician's sample selection capabilities and not on a hard and fast selection process. In most situations, output of a survey conducted with a non-probable sample results in skewed results, which cannot totally represent the specified target population. But there are situations like the preliminary stages of research or where there are cost constraints for conducting research, where non-probability sampling is going to be far more effective than the opposite type.

There are 4 sorts of non-probability sampling which can explain the aim of this sampling method during a better manner:

Convenience sampling: This method depends on the convenience of access to subjects like surveying customers at a mall or passers-by on a busy street. it's usually termed as convenience sampling, as it's administered on the idea of how easy is it for a researcher to urge in-tuned with the themes. Researchers have nearly no authority over selecting elements of the sample and it's purely done on the idea of proximity and not representativeness. This non-probability sampling method is employed when there are time and price limitations in collecting feedback. In situations where there are resource limitations like the initial stages of research, convenience sampling is employed.

For example, startups and NGOs usually conduct convenience sampling at a mall to distribute leaflets of upcoming events or promotion of a cause – they are doing that by standing at the doorway of the mall and giving out pamphlets randomly.

Judgmental or Purposive Sampling: In judge mental or purposive sampling, the sample is made by the discretion of the judge purely considering the aim of study alongside the understanding of audience. Also referred to as deliberate sampling, the participants are selected solely on the idea

of research requirements and elements who don't suffice the aim are kept out of the sample. as an example, when researchers want to know the thought process of individuals who have an interest in studying for his or her master's degree. the choice criteria are going to be: "Are you curious about studying for Masters in ...?" and people who respond with a "No" will be excluded from the sample.

Snowball sampling: Snowball sampling may be a sampling method that's utilized in studies which require to be administered to know subjects which are difficult to trace. for instance, it'll be extremely challenging to survey shelter less people or illegal immigrants. In such cases, using the snowball theory, researchers can track a couple of of that specific category to interview and results are going to be derived thereon basis. This sampling method is implemented in situations where the subject is very sensitive and not openly discussed like conducting surveys to collect information about HIV Aids. Not many victims will readily answer the questions but researchers can contact people they could know or volunteers related to the cause to urge in-tuned with the victims and collect information.

Quota sampling: In Quota sampling, selection of members during this sampling technique happens on basis of a pre-set standard. during this case, as a sample is made on basis of specific attributes, the created sample will have an equivalent attribute that are found within the total population. it's a particularly quick method of collecting samples.

Use of the Non-Probability Sampling Method

There are multiple uses of the non-probability sampling method. They are:

Create a hypothesis: The non-probability sampling method is employed to make a hypothesis when limited to no prior information is available. This method helps with immediate return of knowledge and helps to create a base for any longer research.

Exploratory research: This sampling technique is widely used when researchers aim at conducting qualitative research, pilot studies or exploratory research.

Budget and time constraints: The non-probability method when there are budget and time constraints and a few preliminary data has got to be collected. Since the survey design isn't rigid, it's easier to select respondents randomly and have them take the survey or questionnaire.

Measurement

Measurement is that the process of observing and recording the observations that are collected as a part of a search effort. Levels of Measurement in Statistics

To perform statistical analysis of knowledge, it's important to first understand variables and what should be measured using these variables. There are different levels of measurement in statistics and data measured using them are often broadly classified into qualitative and quantitative data.

First, let's understand what a variable is. A quantity whose value changes across the population and may be measured is named variable. As an example, consider a sample of employed individuals. The variables for this set of the population are often industry, location, gender, age, skills, job-type, etc. The worth of the variables will differ with each employee.

For example, it's practically impossible to calculate the typical hourly rate of a worker within the US. So, a sample audience is randomly selected such it represents the larger population appropriately. Then the typical hourly rate of this sample audience is calculated. Using statistical tests, you'll conclude the typical hourly rate of a bigger population.

The level of measurement of a variable decides the statistical test type to be used. The mathematical nature of a variable or in other words, how a variable is measured is taken into account because the level of measurement.

What are Nominal, Ordinal, Interval and Ratio Scales?

Nominal, Ordinal, Interval, and Ratio are defined because the four fundamental levels of measurement scales that are used to capture data within the sort of surveys and questionnaires, each being a multiple-choice question.

Each scale is an incremental level of measurement, meaning, each scale fulfills the function of the previous scale, and every one survey question scales like Likert, Semantic Differential, Dichotomous, etc., are the derivation of these 4 fundamental levels of variable measurement. Before we discuss all four levels of measurement scales in details, with examples, let's have a fast brief check out what these scales represent.

Nominal scale may be a naming scale, where variables are simply "named" or labeled, with no specific order. Ordinal scale has all its variables during a specific order, beyond just naming them. Interval scale offers labels, order, also as, a selected interval between each of its variable options. Ratio scale bears all the characteristics of an interval scale, additionally thereto, it also can accommodate the worth of "zero" on any of its variables.

Here's more on Nominal, Ordinal, Interval, Ratio: The four levels of measurement in research and statistics.

Nominal Scale: 1st Level of Measurement

Nominal Scale, also called the specific variable scale, is defined as a scale used for labeling variables into distinct classifications and doesn't involve a quantitative value or order. This scale is that the simplest of the four variable measurement scales. Calculations done on these variables are going to be futile as there's no numerical value of the choices.

There are cases where this scale is employed for the aim of classification – the numbers related to variables of this scale are only tags for categorization or division. Calculations done on these numbers are going to be futile as they need no quantitative significance.

For an issue such as:

Where does one live?

1- Suburbs

2- City

3- Town

Nominal scale is usually utilized in research surveys and questionnaires where only variable labels hold significance.

For instance, a customer survey asking “Which brand of smartphones does one prefer?” Options: “Apple”- 1, “Samsung”-2, “OnePlus”-3.

In this survey question, only the names of the brands are significant for the researcher conducting marketing research. there's no need for any specific order for these brands. However, while capturing nominal data, researchers conduct analysis supported the associated labels.

In the above example, when a survey respondent selects Apple as their preferred brand, the info entered and associated are going to be “1”. This helped in quantifying and answering the ultimate question – what percentage respondents selected Apple, what percentage selected Samsung, and the way many went for OnePlus – and which one is that the highest.

This is the elemental of quantitative research, and nominal scale is that the most fundamental research scale.

Nominal Scale Data and Analysis

There are two primary ways during which nominal scale data are often collected:

By asking an open-ended question, the answers of which may be coded to a respective number of labels decided by the researcher.

The other alternative to gather nominal data is to incorporate a multiple-choice question during which the answers are going to be labeled.

In both cases, the analysis of gathered data will happen using percentages or modemed., the foremost common answer received for the question. it's possible for one question to possess quite one mode because it is feasible for 2 common favorites can exist during a target population.

Nominal Scale Examples

Gender

Political preferences

Place of residence

What is your Gender? what's your Political preference? Where does one live?

M- Male 1- Independent 1- suburbs

F- Female 2- Democratic 2- town

3- Republican 3- city

Nominal Scale

In this, you'll specify the extent of measurement as scale (numeric data on an interval or ratio scale), ordinal, or nominal. Nominal and ordinal data are often either string alphanumeric or numeric.

Upon importing the info for any variable into the SPSS input data, it takes it as a scale variable by default since the info essentially contains numeric values. it's important to vary it to either nominal or ordinal or keep it as scale counting on the variable the info represents.

Ordinal Scale: 2nd Level of Measurement

Ordinal Scale is defined as a variable measurement scale wont to simply depict the order of variables and not the difference between each of the variables. These scales are generally wont to depict non-mathematical ideas like frequency, satisfaction, happiness, a degree of pain, etc. it's quite straightforward to recollect the implementation of this scale as 'Ordinal' sounds almost like 'Order', which is strictly the aim of this scale.

Ordinal Scale maintains description qualities alongside an intrinsic order but is barren of an origin of scale and thus, the space between variables can't be calculated. Description qualities indicate tagging properties almost like the nominal scale, additionally to which, the ordinal scale also features a relative position of variables. Origin of this scale is absent thanks to which there's no fixed start or "true zero".

Ordinal Scale Examples

Status at workplace, tournament team rankings, order of product quality, and order of agreement or satisfaction are a number of the foremost common samples of the ordinal Scale. These scales are generally utilized in marketing research to collect and evaluate relative feedback about product satisfaction, changing perceptions with product upgrades, etc.

For example, a semantic differential scale question such as:

How satisfied are you with our services?

Very Unsatisfied – 1

Unsatisfied – 2

Neutral – 3

Satisfied – 4

Very Satisfied – 5

Here, the order of variables is of prime importance then is that the labeling. Very unsatisfied will always be worse than unsatisfied and satisfied are going to be worse than very satisfied.

This is where ordinal scale may be a step above nominal scale – the order has relevancy to the results then is their naming.

Analyzing results supported the order alongside the name becomes a convenient process for the researcher.

If they shall obtain more information than what they might collect employing a nominal scale, they will use the ordinal scale.

This scale not only assigns values to the variables but also measures the rank or order of the variables, such as:

Grades

Satisfaction

Happiness

How satisfied are you with our services?

1- Very Unsatisfied

2- Unsatisfied

3- Neural

4- Satisfied

5- Very Satisfied

Ordinal Data and Analysis

Ordinal scale data are often presented in tabular or graphical formats for a researcher to conduct a convenient analysis of collected data. These methods are generally implemented to match two or more ordinal groups.

Interval Scale: 3rd Level of Measurement

Interval Scale is defined as a numerical scale where the order of the variables is understood also because the difference between these variables. Variables that have familiar, constant, and computable differences are classified using the Interval scale. it's easy to recollect the first role of this scale too, 'Interval' indicates 'distance between two entities', which is what Interval scale helps in achieving.

These scales are effective as they open doors for the statistical analysis of provided data. Mean, median, or mode are often wont to calculate the central tendency during this scale. the sole drawback of this scale is that there no pre-decided start line or a real zero value.

Interval scale contains all the properties of the ordinal scale, additionally to which, it offers a calculation of the difference between variables. the most characteristic of this scale is that the equidistant difference between objects.

For instance, consider a Celsius/Fahrenheit scale –

80 degrees is usually above 50 degrees and therefore the difference between these two temperatures is that the same because the difference between 70 degrees and 40 degrees.

Also, the worth of 0 is bigoted because negative values of temperature do exist – which makes the Celsius/Fahrenheit scale a classic example of an interval scale.

Interval scale is usually chosen in research cases where the difference between variables may be a mandate – which can't be achieved employing a nominal or ordinal scale. The Interval scale quantifies the difference between two variables whereas the opposite two scales are solely capable of associating qualitative values with variables.

The mean and median values in an ordinal scale are often evaluated, unlike the previous two scales.

In statistics, interval scale is usually used as a numerical value can't only be assigned to variables but calculation on the idea of these values also can be administered.

Even if interval scales are amazing, they are doing not calculate the “true zero” value which is why subsequent scale comes into the image.

Interval Data and Analysis

All the techniques applicable to nominal and ordinal data analysis are applicable to Interval Data also. aside from those techniques, there are a couple of analysis methods like descriptive statistics, correlation multivariate analysis which is extensively for analyzing interval data.

Descriptive statistics is that the term given to the analysis of numerical data which helps to explain, depict, or summarize data during a meaningful manner and it helps in calculation of mean, median, and mode.

Interval Scale Examples

There are situations where attitude scales are considered to be interval scales.

Apart from the scale, time is additionally a really common example of an interval scale because the values are already established, constant, and measurable.

Calendar years and time also fall into this category of measurement scales.

Likert scale, Net Promoter Score, Semantic Differential Scale, Bipolar Matrix Table, etc. are the most-used interval scale examples.

The following questions fall into the Interval Scale category

What is the temperature in your city?

At a primary glance all the various scales which may seem similar and simply replaceable by one another. However, as you study them thorough, you realize the range of their natures and differences in their uses and their findings. There are over 20 differing types of scales that are employed by researchers in online surveys. they will be categorized in two classes – comparative scales and non-comparative scales.

There are variety of things you would possibly consider when choosing which scales to include during a questionnaire and which of them to use while analyzing data. a number of the factors are:

The type of knowledge that's required from the respondent – ratio, interval, ordinal or nominal.

How the knowledge is going to be used once it's acquired.

Number of divisions within the scale – odd or maybe.

Types of statistical analysis methods to be used after data is acquired.

The physical sort of the size – vertical, linear, horizontal, etc.

Details to be provided within the scale as labels.

Whether or not response to an issue is mandatory.

Since non-comparative scaling techniques are easier and simpler to know, we'll introduce to you the foremost important four scales. You'll be delighted to ascertain how easy it's to know and use them. those that already realize it them are encouraged to discuss the post and allow us to know any tips which may further help our readers in using these scales.

1. Graphic Rating Scale

How satisfied are you with the following:

Very Unsatisfied 0 100 Very Satisfied

Website	91	
Customer Service	97	
Overall	94	

A graphic rating scale, also referred to as endless rating scale usually seems like the figure drawn above. The ends of the continuum are sometimes labeled with opposite values. Respondents are required to form a mark at any point on the size that they find appropriate. Sometimes, there are numbers along the markings of the road too. At other times, there are not any markings in the least on the road.

2. Likert

Scale

How satisfied are you with our service?

☐ Very Unsatisfied ☐ Unsatisfied ☐ Neutral ☒ Satisfied ☐ Very Satisfied

A Likert scale typically contains an odd number of options, usually 5 to 7. One end is labeled because the most positive end while the opposite one is labeled because the most positive one with the label of 'neutral' within the middle of the size.

The phrases 'purely negative' and 'mostly negative' could even have been 'extremely disagree' and 'slightly disagree'.

3. Semantic Differential Scale (Max Diff)

How satisfied are you with the following:	Least	Most
Ease-of-use	☐	☐
Speed	☐	☐
Design	☐	☐
Size	☐	☐
Durability	☐	☐

A semantic differential scale may be a combination of quite one continuum. it always contains an odd number of radio buttons with labels at opposite ends. Max Diff scales are often utilized in trade-off analysis like conjoint.

Madoff analysis are often utilized in new product features research or or maybe market segmentation research to urge accurate orderings of the foremost important product features. Discriminate among feature strengths more effectively than derived importance methodologies. Like other trade-off analyses, the analysis derives utilities for every of the foremost important product features which may be wont to derive optimal products, using market segmentation to place respondents into groups with similar preference structures, or to prioritize strategic product goals.

You can have your respondents perform Forced-choice nature of the tasks, and disentangle the relative feature importance in cases where average Likert-style ratings might all have very similar ratings.

4. Side-by-Side Matrix

Importance					Satisfaction				
Not Important			Very Important		Not Satisfied			Very Satisfied	
1	2	3	4	5	1	2	3	4	5
☐	☐	☐	☒	☐	☐	☐	☐	☐	☒
☐	☐	☐	☐	☒	☐	☐	☐	☒	☐
☐	☐	☐	☐	☒	☐	☐	☐	☒	☐

Another very commonly used scale in questionnaires is that the side-by-side matrix. a standard and powerful application of the side-by-side matrix is that the importance/satisfaction sort of question.

First, ask the respondent how important an attribute is, then ask them how satisfied they're together with your performance during this area. logic and loop functions also allow you to run through this question multiple times with other alternatives that the respondent might consider. This yields benchmark data which will allow you to match your performance against other competing alternatives.

Here is an example of knowledge from an importance/satisfaction question. The importance rating is that the line and therefore the performance ratings are the bars. With this sort of knowledge, you'll actually see where your company must increase its efforts to more closely meet the requirements of the customer.

While there are many online survey tools and online survey software to settle on from, you'll find that not all of them have these differing types of scales available to them.

As you're designing your survey, make certain to supply a spread of scales. Using different scales in your survey will engage the respondent more fully and stop them from clicking the very best, lowest or middle rating all the time. Another benefit to using different sorts of scales in your survey is that every scale provides you a singular perspective on the info that you simply are analyzing.

Before designing your survey, review the various sorts of scales and question types inside your online survey tool and make certain to select the one which will best assist you make your decision.

DATA ANALYSIS AND INTERPRETATION

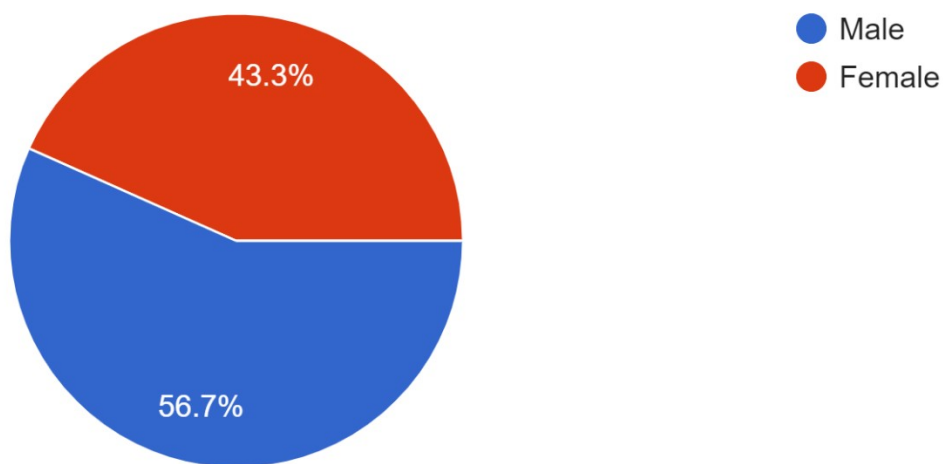

DATA ANALYSIS AND INTERPRETATION

1. Gender distribution of respondents.

Sl.no	Particulars	Number of Response	Percentage
1	Male	51	56.7%
2	Female	39	43.3%
3	Total	90	100%

Interpretation: Majority of response are Male as it is 56.7% and rest are Female respondents.

Chart 1.1

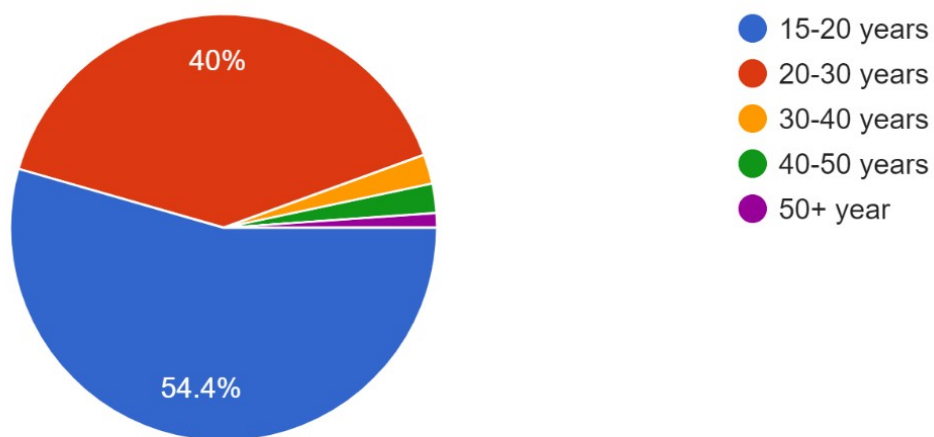

2.Age distribution of respondents.

Sl.no	Particulars	Number of Response	Percentage
1	15-20 years	49	54.4%
2	20-30 years	36	40%
3	30-40 years	2	2.2%
4	40-50 years	2	2.2%
5	50+ years	1	1.1%
6	Total	90	100%

Interpretation: The age group between 15-20 years are the maximum respondents as they are 54.4%

Chart 2.1

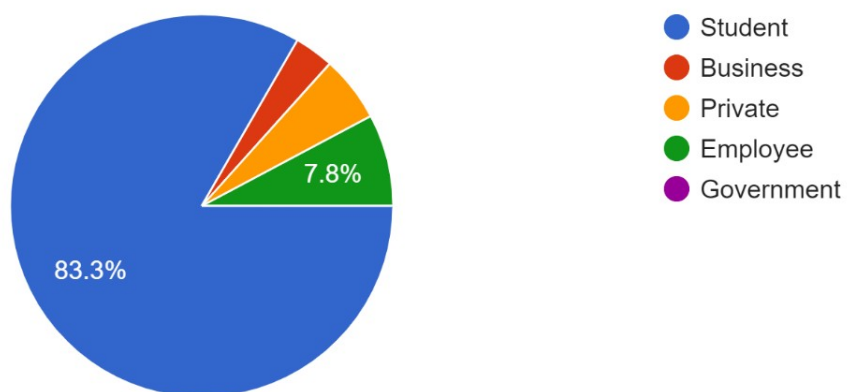

3. Profession distribution of respondents.

Sl.no	Particulars	Number of Response	Percentage
1	Student	75	83.3%
2	Business	3	3.3%
3	Private	5	5.6%
4	Employee	7	7.8%
5	Government	0	0%
6	Total	90	100%

Interpretation: The maximum number of respondents are Students 83%

Chart 3.1

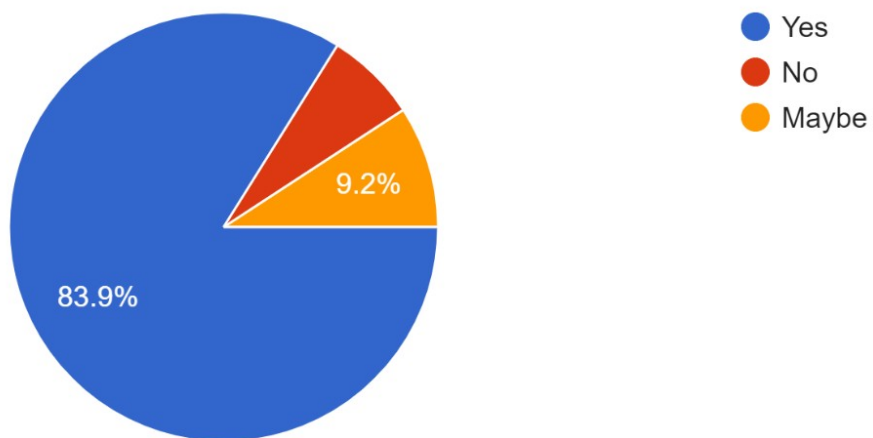

4.Do you use Swiggy

Sl.no	Particulars	Number of Response	Percentage
1	Yes	73	83.9%
2	No	8	6.9%
3	Maybe	9	9.2%
4	Total	90	100%

Interpretation: Majority of response are YES as its 83.9% and No are 6.9%

Chart 4.1

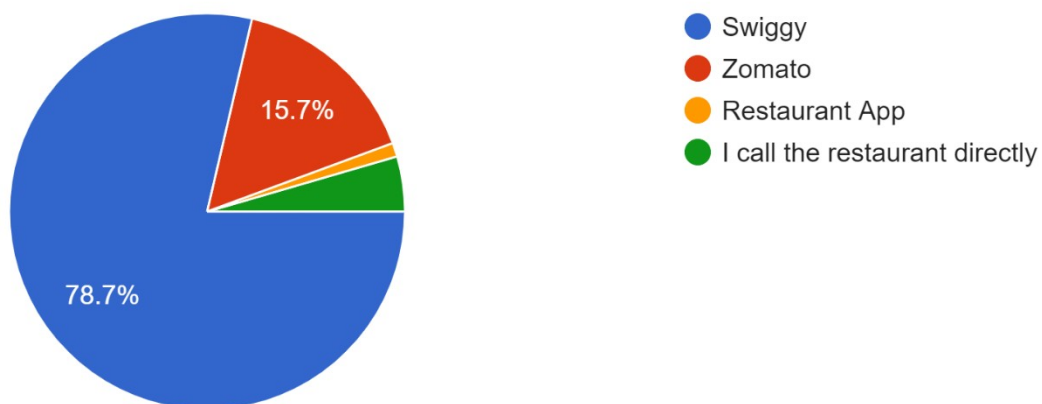

5.How do you order food online

Sl.no	Particulars	Number of Response	Percentage
1	Swiggy	70	78.7%
2	Zomato	15	15.7%
3	Restaurant App	1	1.1%
4	I call the restaurant directly	4	4.5%
5	Total	90	100%

Interpretation: Majority of the response are Swiggy as its 78.7% second comes Zomato as its 15.7%

Chart 5.1

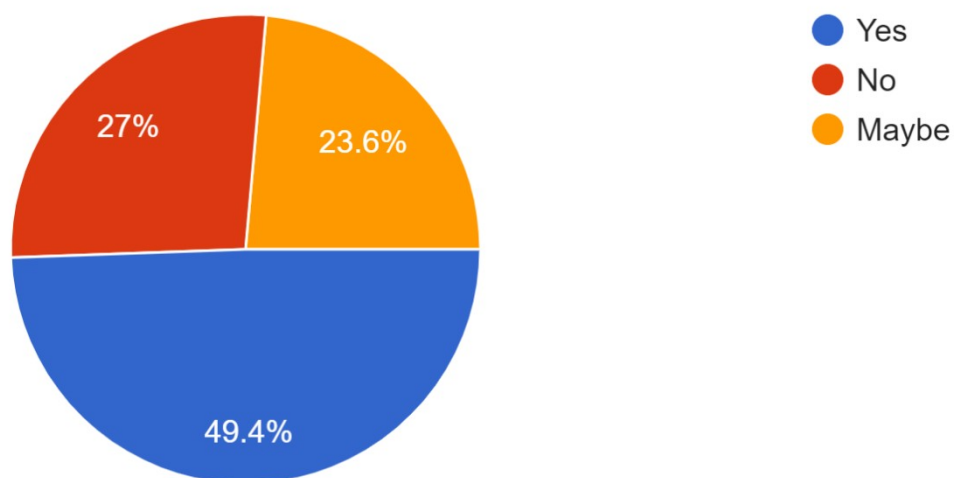

6.Do you order food on a frequent basis

Sl.no	Particulars	Number of Response	Percentage
1	Yes	44	49.4%
2	No	25	27%
3	Maybe	21	21%
5	Total	90	100%

Interpretation: Majority of responds are Yes as its 49.4%

Chart 6.1

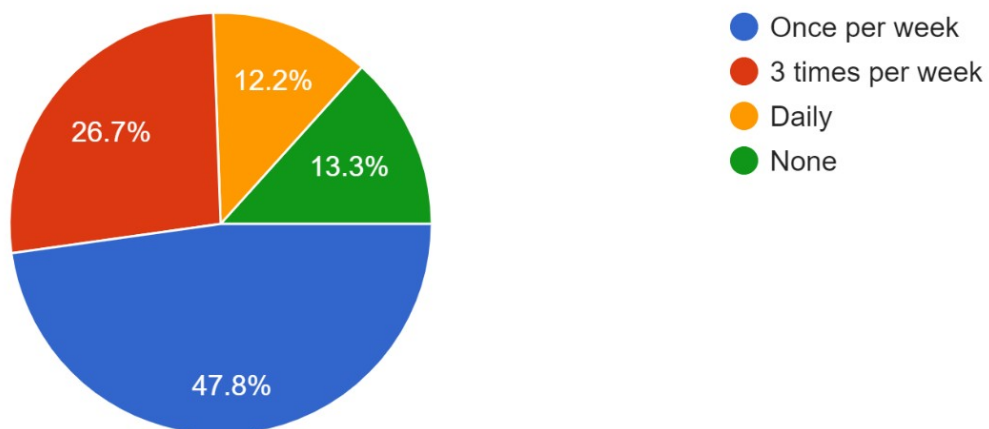

7.How many times do you order on an average in a week

Sl.no	Particulars	Number of Response	Percentage
1	Once per week	43	47.8%
2	3 times per week	24	26.7%
3	Daily	11	12.2%
4	None	12	13.3%
5	Total	90	100%

Interpretation: Majority of response order once per week- 47.8%

Chart 7.1

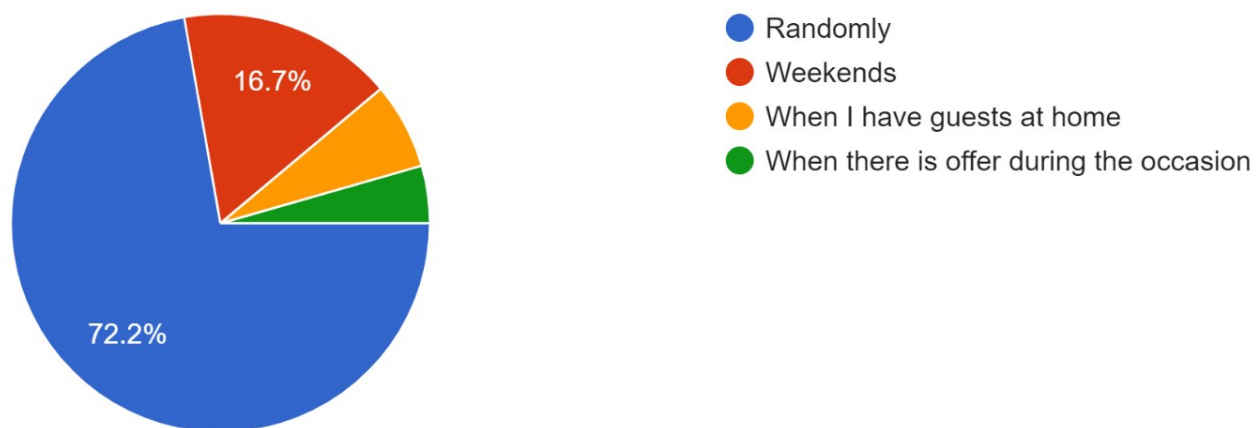

8.On what occasion do you usually order food for delivery

Sl.no	Particulars	Number of Response	Percentage
1	Randomly	65	72.2%
2	Weekends	15	16.7%
3	When I have guests at home	6	6.7%
4	When there is offer during the occasion	4	4%
5	Total	90	100%

Interpretation: Majority of customer order food Randomly- 72.2% and in second customer order food during weekends-16.7

Chart 8.1

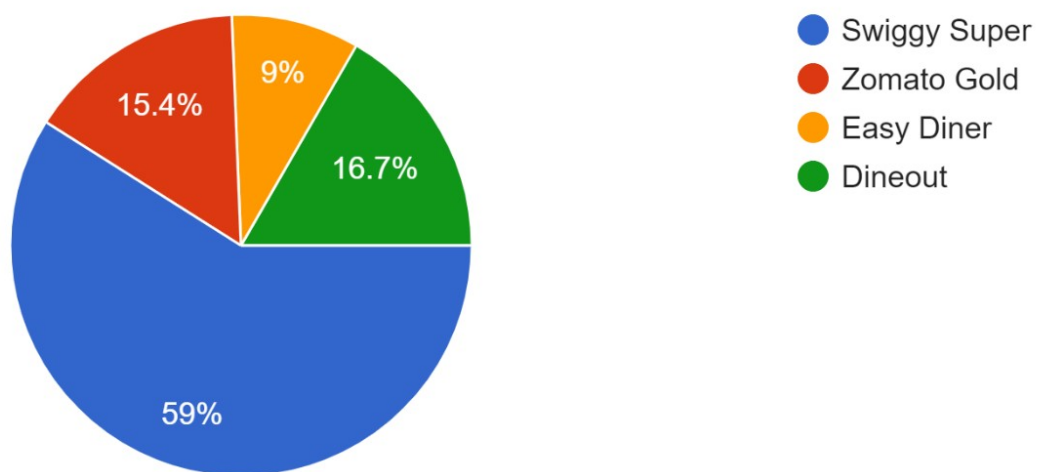

9. Which subscription plan do you have

Sl.no	Particulars	Number of Response	Percentage
1	Swiggy Super	49	59%
2	Zomato Gold	15	15.4%
3	Easy diner	10	9%
4	Dineout	16	16.7%
5	Total	90	100%

Interpretation: Majority of the customer use Swiggy Super-59%

Chart 9.1

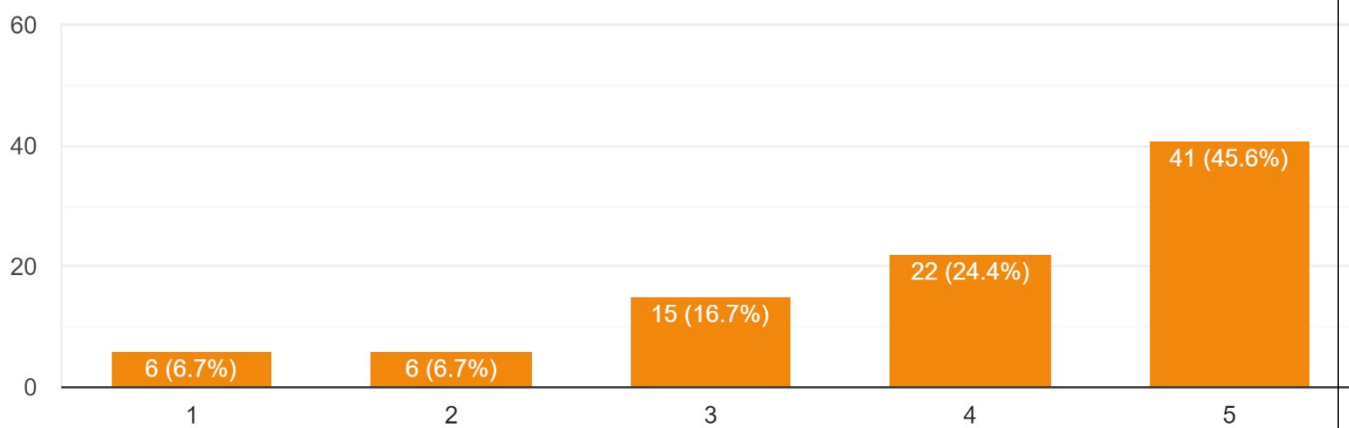

10.What impact does promotion and discounts have on your online ordering habits

Sl.no	Particulars	Number of Response	Percentage
1	1 (low impact)	6	6.7%
2	2	6	6.7%
3	3	15	16.7%
4	4	22	24.4%
5	5 (high impact)	41	45.6%
6	Total	90	100%

Interpretation: Majority of response have High Impact-45.6%

Chart 10.1

11. Which of the following has maximum impact on your food ordering habits in Swiggy

Sl.no	Particulars	Number of Response	Percentage
1	App Discounts	65	65
2	Less Delivery time	25	25
3	Restaurant Cost	29	29
4	Less charges	43	43

Interpretation: Majority of response look for App discounts- 65 counts

Chart 11.1

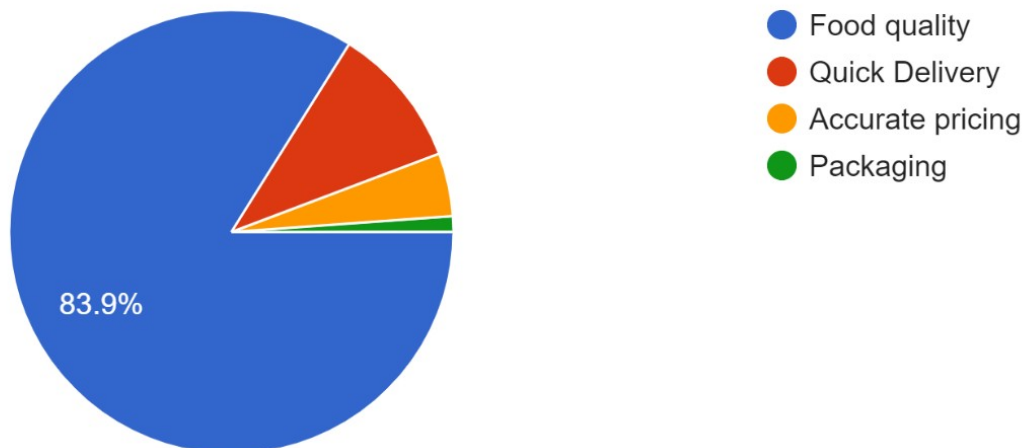

12. When ordering food online, what is your TOP concern

Sl.no	Particulars	Number of Response	Percentage
1	Food Quality	76	83.9%
2	Quick Delivery	9	10.3%
3	Accurate Pricing	4	4.6%
4	Packaging	1	1.2%
5	Total	90	100%

Interpretation: Majority of customer prefer food quality-83.9% as their top concern

Chart 12.1

13.How likely will you recommend Swiggy to your friends and relatives

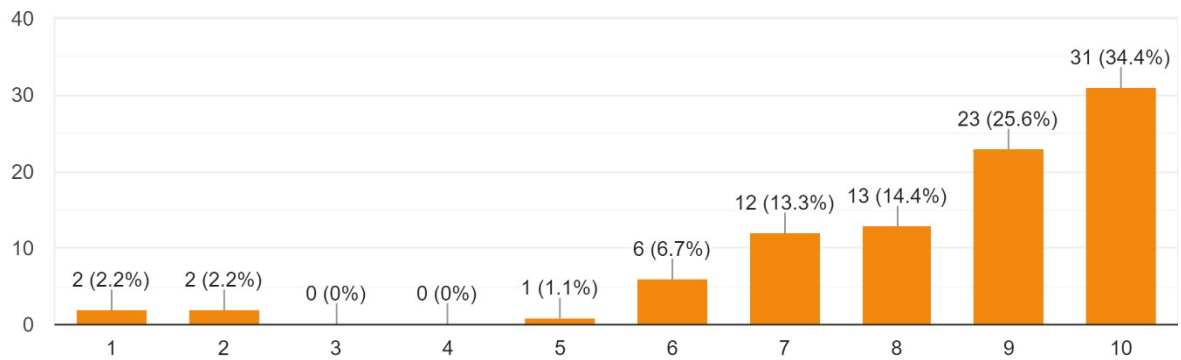

Sl.no	Particulars	Number of Response	Percentage
1	1	2	2.3%
2	2	2	2.3%
3	3	0	0%
4	4	0	0%
5	5	1	1.1%
6	6	6	6.9%
7	7	12	13.8%
8	8	13	13.8%
9	9	23	25.3%
10	10	31	34.5%
11	Total	90	100%

Interpretation: Majority of customers are by recommendation as its 34.5

Chart 13.1

15.How likely will you recommend Swiggy to your friends and relatives

90 responses

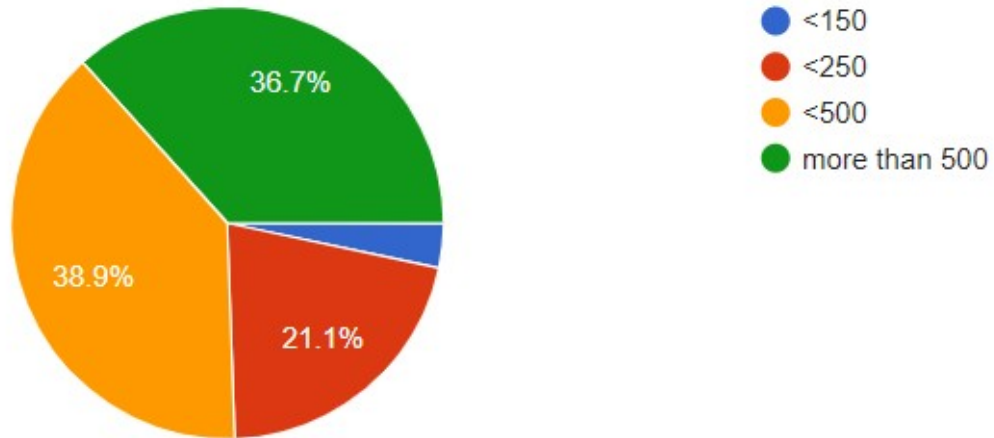

14.What is the approximate money you spend on ordering food

Sl.no	Particulars	Number of Response	Percentage
1	<150	3	3.3%
2	<250	19	21.1%
3	<500	35	38.9%
4	More than 500	33	36.7%
5	Total	90	100%

Interpretation: Majority of the customer spend less than 500-38.9%

Chart 14.1

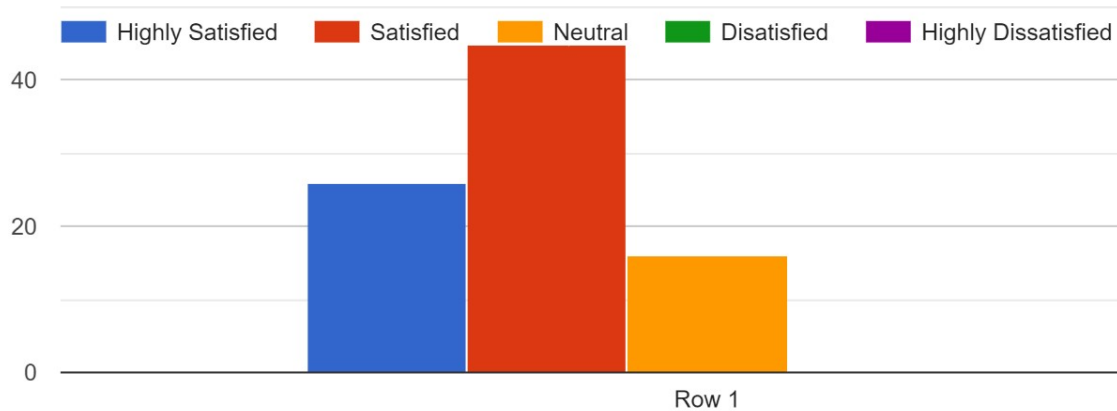

15. Are you satisfied ordering food in Swiggy

Sl.no	Particulars	Number of Response	Percentage
1	Highly Satisfied	27	29%
2	Satisfied	46	51%
3	Neutral	17	18%
4	Dissatisfied	Nil	Nil
5	Highly Dissatisfied	Nil	Nil
6	Total	90	100%

Interpretation: Majority of the customer are satisfied-51% with Swiggy and 29% are highly satisfied with Swiggy

Chart 15.1

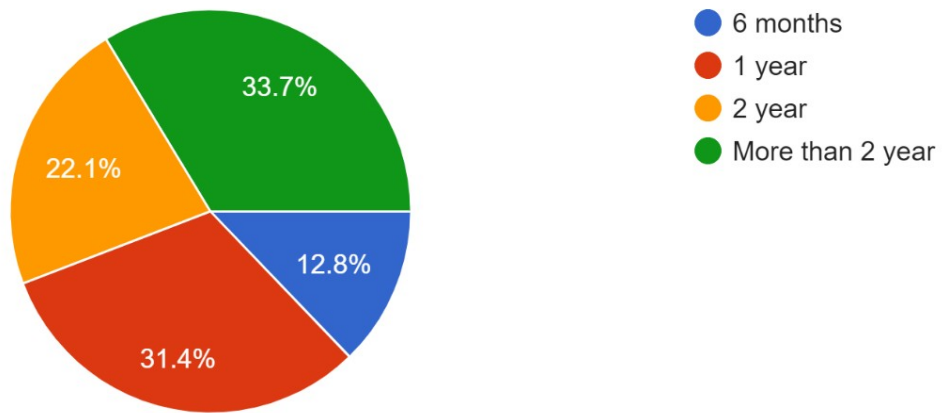

16.Since how long have you been ordering food through Swiggy

Sl.no	Particulars	Number of Response	Percentage
1	6 months	12	12.8%
2	1 year	28	31.4%
3	2 year	20	22.1%
4	More than 2 year	30	33.7%
5	Total	90	100%

Interpretation: Majority of customer are more than 2 years-33.7%

Chart 16.1

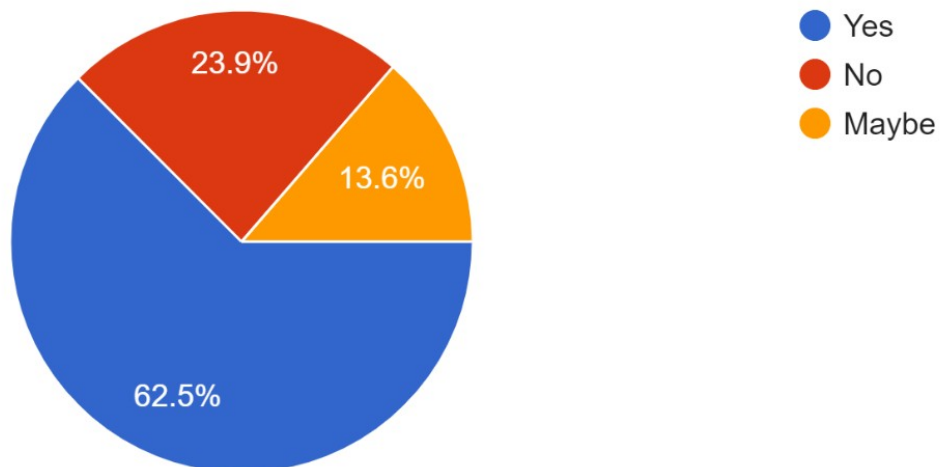

17. Did you order from Swiggy during the lockdown

Sl.no	Particulars	Number of Response	Percentage
1	Yes	55	62.5%
2	No	22	23.9%
3	Maybe	13	13.6%
5	Total	90	100%

Interpretation: Majority of the customer have ordered food during lockdown-62.5%

Chart 17.1

Chapter 4.1

Findings and Suggestion

FINDINGS AND SUGGESTION

1. Majority of response are Male as it is 56.7%
2. The age group between 15-20 years are the maximum respondents as they are 54.4%
3. The maximum number of respondents are Students 83%
4. Majority of response are YES as its 83.9%
5. Majority of the response are Swiggy as its 78.7%
6. Majority of responds are Yes as its 49.4%
7. Majority of response order once per week- 47.8%
8. Majority of customer order food Randomly- 72.2%
9. Majority of the customer use Swiggy Super-59%
10. Majority of response have High Impact-45.6%
11. Majority of response look for App discounts- 65 counts
12. Majority of customer prefer food quality-83.9% as their top concern
13. Majority of customers are by recommendation as its 34.5
14. Majority of the customer spend less than 500-38.9%

15. Majority of the customer are satisfied-51% with Swiggy and 29% are highly satisfied with Swiggy

16. Majority of customer are using swiggy more than 2 years-33.7%

17. Majority of the customer have ordered food during lockdown-62.5%

Chapter – 5

COCNLUSION

CONCLUSION

The Business model canvas is, in our groups view an excellent start line for brainstorming and creating a summary plan for the business. Although, it's significant advantages where it allows to spot business revenue stream, costs and activities but it doesn't include any notion of completion or any external environmental that would affect a business. Therefore, we believe that Business model canvas shouldn't be confused with a technique tool. It's certainly very useful, but there are much more tools that business will need in order to achieve a competitive environment. Whether you're a longtime business or simply getting started, a business model canvas is a tremendous tool to assist you reach your goals. It provides you with a 1-page document that cuts out the fluff lays everything out right ahead of you. It's easily editable so as your business changes you'll change your canvas to match. And if you're creating a lean startup, there's a business model canvas made only for you.

Swiggy a bit like other such platforms were at high risk of multihoming. Customers generally searched for their favorite restaurants on Zomato, UberEATS and Swiggy before ordering. They were generally watching the simplest rates and their favorite restaurants. All platforms are offering significant discounts to the purpose where dishes were cheaper on these platforms than they were in restaurants. Here is where Swiggy began to sign exclusivity contracts with restaurants. Swiggy Exclusive restaurants were shown before others incentivizing the restaurants to be exclusive on Swiggy. With nearly half the market share by transactional volume within the Indian online food-delivery space held by Swiggy, the restaurants weren't to displeased with the offering. This move also locked in customers who were loyal to their favorite restaurants.

Swiggy a bit like other such platforms were at high risk of multihoming. Customers generally searched for their favorite restaurants on Zomato, UberEATS and Swiggy before ordering. They were generally watching the simplest rates and their favorite restaurants. All platforms are offering significant discounts to the purpose where dishes were cheaper on these platforms than they were in restaurants. Here is where Swiggy began to sign exclusivity contracts with restaurants. Swiggy Exclusive restaurants were shown before others incentivizing the restaurants to be exclusive on Swiggy. With nearly half the market share by transactional volume within the Indian online food-delivery space held by Swiggy, the restaurants weren't to displeased with the offering. This move also locked in customers who were loyal to their favorite restaurants.

From the hyper-funding wave of 2014-15, Swiggy is that the only brand that continues to thrive and grow. Despite the fierce competition from Zomato & Food panda, Swiggy successfully made its thanks to the food delivery space and have become a unicorn start-up.

- The Sharp specializes in Logistics

The success and fame Swiggy got is simply because they deeply cared about their logistics operations and aimed to form it accessible through a click. They put the logistics at the center of their operations. that specialize in logistics led to a successful future for swiggy with low cost and happy & strong network.

- Catch the chance as soon as possible

Once you recognize what you'll do, your next move is to acknowledge the newest trend. Founders of Swiggy were well-aware of the logistics industry. They knew that the food industry lacks technology and speed to attach customers with brands in one click. They took advantage of the trend and Swiggy was born.

- Build a team with growth mind-set

Swiggy may be a result of a growing team that contributed towards constant efforts without failure. If the founders had accepted defeat after the shutdown of Bundle, they never would have touched the heights on which Swiggy is now. it's the mixture of resilience and growth-mindset that kept the ball rolling.

Truly, Swiggy may be a perfect example of a strong start-up. The brand started with delivering food in one city and now spreading across India. The food-delivery giant is additionally diversifying its logistics business with emergency items like groceries and stationeries. it's been a singular blend of business strategies, marketing strategies and social media strategies which has transformed the business in only 5 years of its inception. There are opportunities for Swiggy to become the No.1 food delivery platform because the company is already giving a troublesome competition to other competitors.

ANNEXURE

Questionnaire

SWIGGY

1) Name _____

2) Gender:

- Male
- Female
- Others

3) Nationality_____

4) Age groups

- 15-20 years
- 20-30 years
- 30-40 years
- 40-50 years
- 50+ years

5) Profession

- Student
- Business
- Private
- Government

6.Do you use Swiggy

- Yes
- No
- Maybe

7.How do you order food online

- Swiggy
- Zomato
- Restaurant App
- I call the restaurant directly

8.Do you order food on a frequent basis

- Yes
- No
- Maybe

9.How many times do you order on an average in a week

- Once per week
- 3 times per week
- Daily
- None

10.On what occasion do you usually order food for delivery

- Randomly
- Weekends
- When I have guests at home
- When there is offer during the occasion

11.Which subscription plans do you have

- Swiggy Super
- Zomato Gold
- Easy Diner
- Dineout

12.What impact does promotion and discounts have on your online ordering habits

- | | |
|-------------------------|-------------|
| | Low Impact |
| ☐ 1 | |
| ☐ 2 | |
| ☐ 3 | |
| ☐ 4 | |
| ☐ 5 | |
| | High impact |

13.Which of the following has maximum impact on your food ordering habits in Swiggy

- App discounts

- Less delivery time
- Restaurant Cost
- Less charges {less delivery fee, tax, etc.}

14. When ordering food online, what is your TOP concern.

- Food quality
- Quick Delivery
- Accurate pricing
- Other:

15. How likely will you recommend Swiggy to your friends and relatives

- ☐ 1
- ☐ 2
- ☐ 3
- ☐ 4
- ☐ 5
- ☐ 6
- ☐ 7
- ☐ 8
- ☐ 9
- ☐ 10

16. What is the approximate money you spend on ordering food

- <150
- <250
- <500
- more than 500

17. Are you satisfied ordering food in Swiggy

- Highly Satisfied
- Satisfied
- Neutral
- Dissatisfied
- Highly Dissatisfied

18. Since how long have you been ordering food through Swiggy

- 6 months
- 1 year

- 2 year
- More than 2 year

19.Did you order from Swiggy during the lockdown

- Yes
- No
- Maybe

20.As we know Swiggy and Zomato are big competitors in online food delivery which do you prefer and why?
